## WELCOME MESSAGE

2005

It gives me great pleasure to welcome you to Abu Dhabi and to IDEX 2005.

IDEX is one of the most prestigious events hosted by the UAE and I am particularly grateful to our beloved former President of the UAE, the late Sheikh Zayed Bin Sultan Al Nahyan, for his keen involvement and support for IDEX from its inception in 1993.

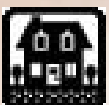

I would also like to extend my thanks for the tireless efforts, encouragement and support IDEX receives from the patron, His Highness Sheikh Khalifa Bin Zayed Al Nahyan, President of the UAE and Supreme Commander of the UAE Armed Forces. The guidance received from Sheikh Zayed and Sheikh Khalifa has ensured that the rapid growth of IDEX mirrors the strides that the UAE has made. The event has grown from strength to strength over the years and today the stature of IDEX is recognised worldwide.

As the organisers of IDEX, our efforts have been centred on continuously providing our exhibitors, visitors and media covering the event, an excellent platform to access information, as well as to evaluate products, services and technology related to defence. I am happy to see that our efforts have been rewarded. I am sure this year's event will continue its tradition of excellence. We thank you all for your ongoing support of this event.

I wish all exhibitors, visitors and press, an interesting and successful IDEX 2005, as the event presents a perfect setting for a great defence show.

**Saeed Saif Bin Jaber Al Suwaidi**

Deputy Chairman of GEC

# Power requires energy SUNLIGHT torpedo batteries

**SUNLIGHT** Industrial Complex has signed a cooperation Agreement with **ATLAS ELEKTRONIK GmbH**, one of the top companies in the field of naval weapon systems worldwide. The two companies shall cooperate in the development of battery systems for a new type of torpedoes, based on SilverZinc technology. This agreement establishes **SUNLIGHT** Industrial Complex as one of the most important global industrial partners as well as leaders in the production of torpedo batteries on a global level.

# I am EADS

My name is Belmer Marschlich. I'm Project Manager for the *Furc Hawk* system, a High Altitude Long Endurance Unmanned Aerial Vehicle or HALE UAV. *Furc Hawk* flies at 60,000 feet for 24 hours or more, coordinating communications in the area concerned, detecting radar emitters and continuously reporting back to base. We're teaming on the project with our American partner, Northrop Grumman. I love being part of an international team. I relish our shared passion for aerospace. I'm making my personal contribution to global security. I am EADS.

## 2nd International **Security & Safety Exhibition & Conference Middle East 2005**

**14 - 17 November 2005**

Abu Dhabi International Exhibition  
& Conference Centre, United Arab Emirates

### ***Book your space now!***

The safety and security of human life and the need to protect workers in all fields is an essential part of every industry. Is your company ready to face the challenge? The Exhibition and Conference - Security & Safety Middle East 2005, will become a groundbreaking event for exhibitors to enter the vast Gulf region and a flagship event for all the industries in this region. Many key security and police departments across the world will attend the event, along with 20,000 visitors, 80 international media establishments who will cover the event. So if safety and security are your concern, be there. Don't miss it.

As part of the exhibition, a conference will be held under the auspicious of the UAE Ministry of Interior. This conference will focus on the development of the Security & Safety market.

Website: www.abeking.com

### ABEKING & RASMUSSEN – HIGH – TECH IN LEMWERDER FOR NEARLY 100 YEARS

In 1907 Georg Abeking and Henry Rasmussen founded a yard for boat- and yachtbuilding specialised in wooden craftsmanship – along the banks of the River Weser. In the course of decades it developed into a highly modern compact shipyard, independent of weather, with sheds made for ships of over 70 m length.

Today the company, whose main focus still lies on ship- and yachtbuilding, delivers to a critical and sophisticated clientele all over the world. A&R design, build, retrofit and repair the following ship types:

#### Navy and Coastguard Ships

- Mine Counter-Measure Vessels
- Patrol Crafts
- Offshore Patrol and Fishery Protection Vessels

#### Special Ships and Workboats

- Monohulls, SWATH-hull types
- Search and Rescue Vessels
- Crew Boats, Pilot Tenders
- Oceanographic and Hydrographic Research Vessels
- Small Passenger Ships

#### High-Performance Yachts

- Luxurious Mega Motor Yachts
- Individually designed high performance Sailing Yachts

E-mail: davidk@ablyshelters.co.uk  
Contact: Mr. David King

Ably Shelters specialises in the design, development, supply and in-service support of rapidly re-locatable

military shelters and temporary buildings. Benefits of Ably Shelter systems include: lowest transportation weight and volume; most rapid deployment with fewest personnel and deployment without mechanical handling machinery.

Ably Shelters' in-service lightweight deployable accommodation includes: Aircraft shelters for Mobile Forward Support and 2nd line scenarios, Headquarters, Early Entry Structures, Workshops, Warehousing, Field Hospitals, Collective Protection, Decontamination, Boat Sheds, Dry-dock Covers, Sunshades, Maintenance Complexes, Multiplex Configurations and High Load Air-Conditioning units.

Ably is uniquely able to supply soft-wall shelters utilising aluminium, steel or composite frames, air beam shelters, and hard-wall shelters ensuring the most appropriate solution is delivered. A comprehensive range of shelter services is available from Ably, completing a single source supply capability for shelters and shelter systems.

Abu Dhabi Ship Building, the specialist Naval Warship builder, is a United Arab Emirates Public Joint Stock Company listed on the Abu Dhabi Securities Market. The company, established in 1996 in cooperation with the UAE Offsets Group (UOG), operates a modern world-class shipyard facility in Abu Dhabi with the ability to build, repair and upgrade complex Naval, Military and Para-Military vessels. The production philosophy of the company is to work in conjunction with carefully chosen strategic partners for the design and build of a wide range of vessels constructed in Steel, Aluminium and Composite materials. ADSB is focused on the supply of vessels, ranging in size up to 85 metres and 2000 tonnes, plus the provision of full refit, upgrade and support services to the regions Naval, Military and Commercial operators. The company has recently confirmed the start of the first 70 metre "Baynunah" Class Corvette program, which is under construction in Cherbourg, France with following ships to be built at ADSB in Abu Dhabi.

ADI is Australia's leading defence, systems engineering company providing a broad spectrum of technologies, systems, products and services. ADI's expertise in military and specialist vehicles includes combat proven wheeled armoured vehicles, land mine protection technology, high mobility engineering vehicles and all terrain fire fighting vehicles that are complemented with a comprehensive logistics support package tailored to meet individual customer requirement. ADI has gained a global reputation for engineering excellence as a single source of integrated solutions with a world-class vehicle design and development team.

### On display at IDEX 2005:

Bushmaster – An infantry mobility vehicle designed to transport up to ten soldiers quickly over long distances, with excellent off-road mobility and very high levels of protection from land mines and other blast weapons as well as small arms and artillery fragments. Options include central tyre inflation and air conditioning capable of operating in high ambient temperatures.

HMEV - The world's only self-deployable, military hardened, purpose-built, high mobility engineering vehicle capable of travelling at high speed (100 km/h) over all terrain types. The HMEV capabilities include breaking, dozing, ripping and digging, allowing it to prepare a full range of earthworks while minimising the transport and logistic support required by commercial engineering vehicles.

Advanced Electronics Company, (AEC) is the leading company in the region capable of manufacturing, support of sophisticated military and commercial electronics exceeding the most demanding military and commercial standards, AEC is MIL-I-45208A, and ISO 9001 certified.

AEC plans to diversity its activities and product base in the military and commercial fields addressing manufacturing, support and systems integration, and expects to team with leading, quality oriented international companies.

**AEC Charter:**

Design, manufacture, support, modification, and upgrades in the electronics field for military and commercial customers.

**Potential areas for cooperation:**

- Co-production / licensed manufacturing to address Saudi and regional market
- Providing logistical and warranty support for your products in the region
- Collaboration in systems projects

**AEC has successfully obtained the following:**

- High Quality Standards
- Strong Research and Development (R&D) Facility
- Modern and High Production Facility
- Highly skilled Saudi Workforce
- Lean Manufacturing Process
- Competitive Prices
- Reliable test and repair capabilities

Nimr 4x4, an off-road extreme utility Military Vehicle, designed and manufactured by Bin Jabr Group Ltd. of Abu Dhabi is not less than a miracle. The vehicle has proven to be one of the best in its kind, after passing through all the vigorous tests and trials by UAE Army.

The very basis of Nimr 4x4 was to equip it with systems and components so as to beat all the contemporary competitors in this category of vehicles.

No vehicle in this range offers as much Power and Torque which Nimr offers. The incredible ground clearance and big wheels, equipped with Bin Jabr patented CTIS system enable this vehicle to surpass even the toughest of cross country with great ease. Nimr climbs 100 percent gradients like no other vehicle can.

The cooling system with extra large radiators is specially designed for UAE worst weather conditions. All the drive and propeller shafts are with constant velocity joints providing the vehicle with vibration free ride of higher speeds on highways.

Special Composite Ceramic Armour system protects the vehicle against the most deadly weapon threats.

Nimr 4x4 is the first ever vehicle which has been designed as per the regional climatic conditions of Middle East. That is the reason that Nimr has caught the eye of many potential buyers in this region. No doubt, Nimr is now seen as one of the most important piece of inventory for many armies in the region.

The factory which produces Nimr is equipped with state-of-the-art automatic machinery and equipment. Factory is designed and equipped to produce 1,000 vehicles a year, with room for further expansion.

All the credit for this achievement goes to the far sightedness and vision of H.E. Saeed S. Bin Jabr Al Suwaidi, owner and president of Bin Jabr Group Ltd, who himself participated in the development stage of this vehicle. A dedicated and professional team of Engineers and Technicians supervised directly by H.E. led to the successful completion of this project.

The all-new Al-Dhabi range of vehicles, manufactured by "Advanced Modular Vehicles", has been engineered to provide the ultimate reliability in the hottest climate. The combination of the Renault RVI technical know-how for the power train and our own life long technical experience with vehicles used in the desert has resulted in this remarkable and highly efficient extreme utility modular vehicle.

Al-Dhabi provides the highest payload in its class, as well as the best performance and off-road ability for the lowest fuel consumption.

Taking all specific military requirements into consideration, Al-Dhabi is available with many advanced features. These include dynamic central tire inflation management, electrical blackout wiring, anti landmine run-flat tyres and standard anti personnel mine protection of the passenger compartment.

The modular concept of the frame and body panels have been designed to make Al-Dhabi a custom built product that can accommodate any special need. The wheelbase and overall dimensions can easily be adapted to better suit custom applications. Al-Dhabi's body panels, frame and mechanical components have been designed to allow the vehicle to be armoured up to Stanag 2 level without power and drive train modifications

Aermacchi is the leading Italian company in the design and manufacturing of integrated military training systems. Its offer covers the whole spectrum of training in its three classic phases: primary, basic and advanced.

Founded in 1913, Aermacchi combines deep experience

and leading-edge technology, which translates into an original scientific approach to military training. As of today, Aeromacchi has sold more than 2,000 trainers to 40 different customer nations.

Presently, Aeromacchi is innovating its product portfolio through a new aircraft, the M-346, which represents the most advanced response to the current military training needs by combining top class performance, high manoeuvrability and limited costs.

Aeromacchi is also increasingly active in the civil aviation fields, through the production of the aerostructures and components for engine nacelles.

The Italian leader in aeronautics and a major European player in the aerospace industry, with full system integration capabilities Since the birth of aeronautics, Alenia Aeronautica has been renowned for its innovative contributions to the industry, with more than 12,000 aircraft built to date. Today, it's estimated a plane built with Alenia components takes off or lands every 30 seconds.

Partnering with governments and major global aeronautics players, Alenia Aeronautica plans, designs, constructs, flies, certifies and modifies (through Aeronavali) military and civilian aircraft such as Eurofighter Typhoon, C-27J, ATR42P and also co-operates in designing and building aircraft such as A380 and B7E7. Its broad systems and process integration competencies make it a valued partner of industry leaders including Boeing, Lockheed-Martin, Airbus, EADS, Dassault and BAE Systems. It is committed to global service and product support.

ALES deal with the development and production of advanced computer-aided systems for both Air Traffic

Management and Air Defence applications, production of Testing and Monitoring systems, Simulation and Training Systems, Radar modernisation and Operator Consoles manufacturing.

ATM systems are in compliance with appropriate international standards for integration at any civil/military ATC centre.

AD applications provide an integrated C3I system for implementation into fixed/mobile command centres to fulfil Air Defence missions at any centralised/decentralised command level. AD systems are interoperable with both NATO and non-NATO systems.

Radar upgrades focus on implementation of advanced electronics and data processing equipment into aging analogue radars to provide their service life extension, performance improvement, reduction of manpower and maintenance actions.

ALES deliver ATC Simulators for training of ATC controllers and Recording & Replay systems for monitoring of ATC environment.

ALES quality management system is ISO 9001 certified.

Armourshield Ltd., an ISO 9001:2000 registered company, has designed and manufactured armour systems for 30 years. The company's reputation for quality and operational effectiveness is a reflection of its commitment to the body armour market.

The company has more official United States National Institute of Justice (NIJ) product certifications than any other non-American body armour manufacturer, the NIJ test being recognised as the most stringent international standard.

Armourshield manufactures a wide range of armour in ballistic, anti-stab and dual purpose formats, each style designed to meet the specific needs of the end user. In addition the company produces a range of ancillary equipment, including upgrade plates, ballistic shields, clipboards, and ballistic downloading bags of various types.

Arzamas Machinery Plant JSC specialises in manufacturing armoured wheeled vehicles, cross-country and special multipurpose vehicles.

Armoured personnel carriers BTR-80A and BTR-90 with 8x8 wheels arrangement are intended for carrying personnel and fire support by organic weapons, crossing water obstacles afloat, and protection against weapons of mass destruction.

BTR-80A APC is a sophisticated derivative of the BTR-80 APC and differs from the basic model in gun armament mounted in the turret. BTR-80A is armed with 30 mm 2A72 automatic gun and 7.62 mm PKT coaxial machine gun.

The BTR-90 APC has 510 hp multi-fuel liquid-cooled turbo-charged diesel engine. The organic weapons are mounted in rotating turret and stabilised in two planes. The armament includes 30 mm 2A42 automatic gun, 7.62 mm PKT coaxial machine gun, 30 mm AG-17 grenade launcher and ATGM system.

Arzamas Machinery Plant also modernises previously manufactured armoured vehicles BTR-60PB, BTR-70 and BRDM-2.

**ATLAS - AUSTRALIAN TEAM FOR LOGISTICS  
ADMINISTRATION AND SALES**

"Marketing Strategy and Relationship Management for Exporters to the Gulf"

**ATLAS** is a UAE based consulting company whose Executives and Directors are Australian citizens with many years experience of living in the Gulf and working at the highest levels of the Defence and Commercial environments; and with a track record of recent Gulf marketing success that is probably unprecedented within Australian industry.

The unique Intellectual Property held within the ATLAS team, supported by a powerful Defence marketing portal, is available to selected companies to help facilitate an entry into one of the fastest growing and well funded defence marketplaces in the World.

Relationships and presence are fundamental to doing business in the Gulf. A key element of success is the ability of companies to follow up on leads and introductions in a timely and well executed way, usually at short notice and sometimes with little initial information

about the customer requirement.

Visiting irregularly to exhibit at trade shows and participate in trade mission initiatives, whilst highly beneficial, will simply not cut it, ultimately, in this marketplace. A means of bridging the gap in a cost effective, professional, and co-ordinated way by people who know what they are doing in this market is needed – ATLAS provides:

A Cost-Effective Market Presence – 7 Days per week

The Ability to React Instantly to Customer Requests

Regional Market and Cultural Knowledge

Arabic Speaking Executive Personnel

Extensive Regional Military and Commercial Experience

Web Enabled Marketing Tools

**ATLAS ELEKTRONIK GmbH** is a leading electronics and systems company which specialises in electronics equipment and systems for defence requirements.

The company has a sound technology base and product range including "sensor-to-shooter" chains for Submarines, Surface Vessels and Mine Counter Measures (MCM) and supplies worldwide:

- All variants of sonar systems for submarines, anti-submarine warfare and minehunting
- Integrated command and control systems for submarines, surface vessels and mine countermeasure boats
- Heavy-weight torpedoes and small size anti torpedo weapons
- Mine disposal vehicles and AUV's

Technological activities at ATLAS range from signal

processing to radar technology, navigation and sea chart display, hydroacoustics, sonar systems, command and weapon control systems, operational software and system engineering

Based on its wide-ranging systems capabilities, the company also acts as prime contractor for system management, system integration and logistics in various areas and participates in operator models. Besides its own certification in accordance with the relevant DIN/ISO criteria, the company has its own certified test laboratories, for instance to test the electromagnetic compatibility of components.

E-mail: [marketing@austal.com](mailto:marketing@austal.com)  
Website: Wilco Veerman, Sales Manager  
Contact: Tara Macilroy, Marketing Officer

An ISO 9000:2001 certified company with four shipyards, Austal is a world leading designer and builder of high performance aluminium vessels for both defence and commercial applications.

The recent completion of 10 naval patrol boats for the Republic of Yemen builds on a successful track record which also includes 17 vessels for Australian agencies and three for Kuwait. Austal also has a prestigious contract to design and build twelve 56 metre Armidale Class patrol boats for the Royal Australian Navy.

Austal is also the ship designer and builder in the General Dynamics team which has been awarded a final design contract, including purchase options, for the US Navy's Littoral Combat Ship project. The team's proposal is based on Austal's breakthrough 127 metre trimaran platform.

Austal's fast ship technology is also being used to great effect in military support roles, proving faster and more cost effective than airlift for the transfer of troops, vehicles and equipment.

The British Pinzgauer commands a unique reputation as a world-class all-terrain vehicle. It offers multi-role versatility, payloads up to 2.5 tonnes, exceptional mobility, ride quality and performance. The latest Pinzgauer, designated the XM (X-treme Mobility), packages a range of now standard features and enhancements including ABS (Anti-lock Braking System), EBD (Electronic Brake Distribution) and ETC (Electronic Traction Control).

The battle-proven Pinzgauer is becoming the vehicle of choice for a growing number of defence applications worldwide. Automotive Technik has recently won major contracts for both the UK and New Zealand - and concurrently is involved with a number of other programmes..

The Pinzgauer is synonymous with the operational requirements of modern rapid-reaction, air-portable deployments. Its operational roles already include personnel carrier, gun tractor, weapons platform, long range reconnaissance and support vehicle, communications centre and ambulance - and the list of special applications and configurations is growing all the time. An Armoured Variant is now also available.

AVIA TECH s.r.o is a Czech enterprise which was founded in 2001. It has large activities in the development of small fire arms, as for military as for civilian users. The results of its development were used for armament of armies of some nations. In this time the development process of a weapons set was in AVIA TECH finished. Some members of this set are exhibits of AVIA TECH exhibition on IDEX 2005. For many of these exhibits is reduced recoil effect and therefore also a reduced dispersion, namely by firing in an automatic mode, typical. This effect is caused by an original innovation of the breech mechanism, which is patent. AVIA TECH s.r.o. is

a 90 percent owner of the enterprise CZECH WEAPONS s.r.o. The concerned parties can see a live demonstration of our weapon prototypes in the seat of AVIA TECH in Czech Republic.

AVITRONICS specialises in the design, development and production of Electronic Warfare systems and associated equipment. Through experience, insight into operational requirements and adaptability Avitronics is able to respond to the EW requirements of end-users, original equipment manufacturers and system integrators throughout the world. In-house capabilities include

microwave, electro-optic and digital software technologies. Our product portfolio ranges from ESM/ELINT systems to threat warning systems that include stand-alone radar, laser and missile approach warners and a fully integrated multi-sensor warning system that combines all three sensor types into one system. Our fully integrated and stand-alone systems have been installed on a wide range of platforms that include fixed and rotary winged aircraft, surface vessels and submarines, combat vehicles and UAVs. A co-operation agreement between Avitronics and SaabTech of Sweden combines leading and state-of-the-art technologies that enable Avitronics to set new standards and stay at the forefront of providing innovative EW solutions.

Avon, the leading designer and manufacturer of NBC/CBRN respiratory protective equipment, is showing the new M50 respirator at IDEX 2005.

Developed at Avon's Melksham facility in the UK, M50 has met the demanding requirements of the US Department of Defence JSGPM program. M50 is due to enter service with all four US armed services from early 2006, ultimately replacing all the current in-service respirator designs.

The M50 offers a leap in capability over current systems, fully addressing historical issues with burden, compatibility and integration.

In addition to the M50, we will be showing the new C50 Police/military respirator. Developed using much of the technology from the JSGPM program, the C50 will

conform to the NIOSH CBRN requirements.

Avon's leading FM12 respirator will also be on show. It has been updated to meet the latest requirements for First Responders, and now carries the CE mark to allow for use by civilians.

AYESAS enjoys an excellent reputation in the Turkish defence industry for the work it has carried out in software

and electronics dating back to the Command, Control and Communications System for Turkey's national air defence system. From this technology base, AYESAS has gained significant experience and built up unique capabilities in the areas of real-time software development, C4I and avionics systems, electronic and mechanical manufacturing, telecommunications and information technologies.

**Main capabilities and products include:**

- Real-time Software Development,
- C4I Systems,
- Avionics Software Development,
- Independent Verification & Validation and Reverse Engineering,
- Tactical Data Communication,
- Electronic and Electromechanical System Design, Production and Assembly,
- Workstations and Computers,
- Ruggedisation of Electronic Equipment,
- Command and Control Consoles for Sea and Air Platforms,
- Aerospace Harness Design and Manufacturing,
- Simulation Systems,
- UHF/VHF Radios.

Company holds CMM Level 3 and ISO 9001-2000 QMS Certificates.

Tel: +7 3852 772013 / 772723 Fax: +7 3852 779522  
E-mail: ovs@transmash.barrt.ru

The “BARNAULTRANSMASH” OJSC is an integrated enterprise specialising in designing as well as in producing of high-speed diesel engines with power ranges of 30-50, 150-650 hp and diesel generator sets of 16, 30, 60, 100, 200 and 315 kW and spare parts for them.

The enterprise manufactures and delivers including for export for military technique:

- Transport diesel engines for tracked wheel vehicles;
- Diesel engines for mobile air defence facilities;
- Marine main and auxiliary diesel engines and diesel generators for Navy vessels;
- Diesel generator sets for energy-supply of anti-aircraft missile systems.

The enterprise produces diesel engines and diesel generator sets of wide national economic applications:

- Diesel engines for river and sea vessels;
- Diesel engines for service of aerodrome vehicles

- shunting locomotives, drilling rigs;
- Gas motor-generating plants capable of 100 kW and 200 kW power.

The enterprise produced spare parts aimed to repair diesel-engines and diesel-generators produced by JSC “Barnaultransmash”.

Contact: Paolo Raffaelli

### **Fabbrica d'Armi Pietro Beretta S.p.A.**

The world's oldest firearm business dates back to 1526. Still family run, Beretta's products are renowned for their quality and reliability and it is for this reason that for many years Beretta's law enforcement and defence firearms have been the official sidearms of Armed Forces and

police forces worldwide. The greatest success story regarding pistols is the adoption by the American Armed Forces and State Police Forces of the Beretta 92 series pistols. France's Gendarmerie Nationale and the "Armée de l'Air" (French Air Force) followed by the Spanish Guardia Civil and the Turkish Police Force have also opted for this solution. Furthermore, the Beretta assault rifle AR 70/90 in calibre 5.56mmx45 NATO is used by the Italian Armed Forces. Of recent release, the Cx4 Storm, a semiautomatic carbine which marries a futuristic look and the use of light and robust polymeric materials to superior performance, versatility, ergonomics, reliability and safety.

### **Benelli Armi S.p.A.**

Benelli forms part of the Beretta Group since 1983. In the realm of a few years, thanks to a constant financial investment and technological development in process as well as product, its penetration of semi-automatic shotguns into the world market has increased. Today it represents one of the most brilliant subsidiaries of the Group. In February 1999, the Benelli M4 Super 90 semi automatic was adopted by the USA Armed Forces as their Interforce Combat shotgun, confirming the faith placed in the technological excellence of the Group's products. Benelli has recently released a new line of semi automatic carbines.

### **Franchi S.p.A.**

Dating back to 1868, Franchi joined the Beretta Group in 1995. Their defence model SPAS 15 semiauto/pump action shotgun, the only in its category to be equipped with an interchangeable magazine, is used by police and military forces all over the world including the Italian Army, Carabinieri and Guardia di Finanza.

### **Sako Oy**

Entering the Beretta Group at the beginning of 2000, this Finnish organisation is famous worldwide for its high level of construction and excellent precision of their hunting and competition bolt-action carbines, named Sako and Tikka T3 Tactical. The Sako TRG 22 and TRG 42 models have been pre-selected by numerous European and non-European countries as their Sniper for precision, long distance shooting. Their outstanding performance makes these rifles the best choice for the most demanding

special forces in the world. With the acquisition of Sako Oy, the product range offered by the Group is complete.

### Stoeger Silah Sanayi As

Established at the end of 2001, this Turkish company is active in the manufacture of good quality, affordable semi automatic shotguns, adding to the Group's existing range.

### Burriss Company Inc

Burriss is the most recent acquisition of Beretta in October 2002 and fits perfectly into the group's strategy of expanding into the non-firearms business. Burriss is the leader in the mid-high USA market of precision scopes for hunting guns and sport binoculars. The company was established in 1972 and is an industrial operation with internal Research & Development, Production and Marketing.

BIANA SA was founded in 1960, with the main purpose of production of workers' protection devices. It is located in privately owned grounds of 6,000 m near Athens and its premises extend in 2,500 m<sup>2</sup>. Since 1980 the company focused in the production of respiratory protection equipment (gas masks and filters breathing air supply systems etc). In 1990 it developed a new model military NBC-gas mask and filter, with a self-financed development project worth 350,000 Euros.

In 1997 we signed a four-year contract with the Hellenic Armed Forces for supplying them with gasmasks and filters. The total investment for this production exceeded 1,150,000 Euros and was also self-financed.

Since 1999, BIANA has operated according to AQAP 110, succeeded by ISO 9001 in June 2002. The company is also equipped with a training-centre for NBC-Protection. The company's current capital is 370,000 Euros. In co-operation with foreign manufacturers BIANA developed also NBC-gas suits, decontamination apparatuses and antidotes.

Bisalloy Steels, producer of Bisplate, is Australia's sole manufacturer of quenched and tempered steel armour plate. Bisplate has become the generic name for quenched and tempered steels in Australia and many countries in Asia. Bisalloy is proudly Australian and manufactures its armour plate at its modern manufacturing facility at Unanderra, south of Sydney, NSW, Australia.

Typical applications are for hulls in Armoured Personnel Carriers (APC) and Light Armoured Vehicles (LAV). Bisalloy Steels is currently supplying all the steel armour plate for the Bushmaster Infantry Mobility Vehicle as well as a number of other APC's and LAV's being manufactured in Australia and around the world. Current sales range from Asia, through to Middle East, Europe and North America. In addition to traditional sales to manufacturers of armoured vehicles, Bisalloy is selling increasing quantities of armour plates to police, military forces, government and civilian applications worldwide. Applications include security vehicles, training facilities, security booths, and embassy 'safe rooms'.

BRAHMOS supersonic cruise missile has been developed jointly by Indian & Russian scientists, as a joint

venture effort. This missile is designed for use in multiple platforms- ships, silos, shore mobile launchers, aircrafts and submarines against land and sea targets. BRAHMOS is the World leader flying all through supersonic with a capability for variable and manoeuvrable trajectories ensuring no reaction time to the enemy and a lethal punch owing to huge kinetic energy of impact.

The company has attained a 100 percent success rates in all the flight trials carried out from land and ship proving the adequacy of the missile system to a maximum range of 290 km with high accuracy and lethality and establishing the reliability of the weapon complex in all weather conditions.

Indian and Russian Navies are in the process of induction of the missile system, which will also be exported to few friendly countries.

Bren-Tronics, Inc. was founded in 1973 and has served the power needs for both military and non-military applications for over thirty-one (31) years. In the early 1990's Bren-Tronics invested heavily in developing rechargeable batteries and charging systems. This effort changed the shape of Bren-Tronics from a simple battery assembler to a company providing SMART electronic

power systems.

Today in our 40,000 sq. ft. modern facility we have a complete team to bring a product from conception to full production. During our employee's travels around the world, they are always proud to introduce the Bren-Tronics organisation as being "ONE STOP SHOPPING" for your power needs. We have a full engineering staff which satisfies electronic design, mechanical / thermal design, software coding, and the manufacturing staff to bring the product to market. Bren-Tronics is a global company and certainly one for solving all your power needs.

Carl Zeiss Optronics is a leader in the development and production of optronic systems for land, air, naval as well

as border control forces. We are a competent partner and competitive supplier in multi-national projects in more than 30 countries worldwide with constantly expanding international activities. As a leading German supplier of opto-electronic sensor technology, our main competency lies in:

- Handheld day/night target observation systems
- Thermal cameras and laser rangefinders
- Sighting systems, periscopes and stabilised sensor platforms
- Small arms optics
- Reconnaissance and laser designator pods
- High-quality optics and opto-mechanical subsystems

Carleton Life Support Systems (CLSS) is a world leader in the application of air separation technology for aviation and commercial applications, aircraft survivability systems and in the design and manufacture of miniature sterling cycle cryogenic coolers.

The core operation is the design and manufacture of On Board Oxygen Generation Systems (OBOGS), which plays a crucial role in simplifying logistics for the military while saving end customers millions of dollars annually.

OBOGS eliminates the need for liquid oxygen (LOX) by using the readily available bleed air from the aircraft's engine. Through CLSS's molecular sieve technology, the air is concentrated into an unlimited supply of breathing oxygen. This system reduces the dependence for heavy, bulky oxygen bottles and eliminates the risks associated with the handling and use of LOX. Additionally, OBOGS operational costs are significantly lower than outdated LOX systems.

CLSS's OBOGS are fitted on a variety of aircraft (F-5, F-16, C-130, JPATS T-6A, AMX, ALX and F-18), in various

countries including the United States, Brazil, Korea, Switzerland, Belgium, & UK.

CLSS is a Cobham plc company.

Cesare Paciotti is one of the finest leading shoe houses in Italy. The new outlets came as a result of the storming success they have been achieving in the European fashion capitals such as Rome, London, Paris and Moscow. Cesare Paciotti, is a highly recognised name when it comes to elegance, style and comfort, with a massive variety of high quality Snake, Crocodile, Kangaroo and Ostrich leathers. In addition to that, their collection of the Arabian style footwear was created to enhance the excellence of their name, and meet the expectations and requirements of the Middle Eastern market.

Due to their high quality standards and the latest design techniques in shoe making for both ladies and gentlemen, convenience is added to their name too, and made it a choice for everyone, Cesare Paciotti was launched in the Middle East in 1997. After the great success, Cesare Paciotti has witnessed in the Gulf Region in UAE (Abu Dhabi, Dubai, Al Ain) a series of outlets were opened in different GCC cities such as Qatar and KSA (Riyadh and Jeddah). The expansion is quite rapid and reflects the company's continuous growth and future aims of covering the whole region.

Established in 1969, the Chung-Shan Institute of Science & Technology (CSIST) has a broad spectrum of advanced scientific and technological capabilities in the areas of aeronautics, mechanics, electronics, radar, information, communication, chemistry, materials, electro-optics and quality assurance, thereby becoming the nation's major scientific resources and development centre on defence technologies.

CSIST pursues autonomous defence and ensures national security using high technology or advanced techniques. It has devoted its efforts to strengthen large weapon systems and development program management capabilities as well as system integration expertise. CSIST also endeavours to develop dual-use technologies and provide customers with high quality, low-cost integrated logistics support.

CMI Defence is specialised in a weapon systems for Light Armoured Vehicles and has a 100 year history in the defence industry. Already recognised as world leader in 90mm calibre gun systems since 1974 with its famous LCTS 90 turret with the Cockerill Mk8 90mm gun and the CSE 90 turret with the Cockerill Mk3 90mm gun, CMI Defence has launched the CT-CV Weapon System (105mm) designed to meet the present and future requirements of modern armed forces for powerful weapons installed on air deployable Light Armoured Vehicles.

This system is compatible with all existing NATO 105mm ammunition and future ammunition.

BLOS firing capability, increased fire power, low recoil force, modularity and crew safety are some of the key features of the system among other advanced technological solutions.

Maintenance, genuine spare parts, training, assistance and upgunning/up-grading of turrett systems are also available from CMI Defence.

CONSTRUCTIONS MECANIKUES DE NORMANDIE, a

privately owned shipyard. 150,000 square metres of facilities are available over 48,000 square metres of which are covered by building halls.

CMN has delivered more than 350 ships.

CMN design and build all types of boats (military and commercial) up to 110m in length and 4,500 tons.

**CMN references its products as:**

The "COMBATTANTE" high speed naval craft, fast attack missile boats, 99 units of which have been exported. The "VIGILANTE", patrol vessels of all types from small coast guards boats up to large offshore petrol vessels. The INTERCEPTORS" ultra fast craft dedicated to anti-smuggling interdiction and control of immigration.

Supply vessels and survey ships.

CMN is the only European fast attack craft builder to include weapon system integration integrated logistic support and training within its group of naval services companies.

The CMN group is fully experienced in assisting overseas countries in the development of their own naval shipbuilding and maintenance industries. CMN was recently awarded its ISO 9001 certificate in recognition of superior qualitywork.

Cobham Countermeasures, part of Cobham plc, comprises two divisions: Wallop Defence Systems Limited (WDS) in the UK and FR Countermeasures Inc (FRC) in the USA,

WDS has over 50 years of pyrotechnic experience and is now a prime supplier of IRCM flares and pyrotechnic products for air, land and sea applications. It is the world leader in the design, development and manufacture of both a new generation of affordable, dual-band spectral flares that protect helicopters, transport and fast jet aircraft against the latest types of man-portable SAM, and MTV aerodynamic flares which supplement spectral flares to give protection against all types of missiles.

WDS also manufactures naval Chaff, IR and torpedo countermeasure systems, missile tracking flares, CERU cartridges, smokes and illuminants, marine and diver signalling devices and a modern, innovative personal signalling kit.

FRC has a new highly automated and environmentally friendly production facility and manufactures US-format IRCM flares for the US and international defence markets.

Colt has been a manufacturer of military weapons for over 150 years. Innovations such as the Gatling Gun, Browning .30 and .50 caliber machine guns, the Thompson submachine gun and the Colt .45 pistol have literally changed the course of history. Today, Colt is still making history with its modular family of weapons. The M16A4 rifle has evolved from 40 years combat experience. The shorter, lighter and highly versatile M4@ Carbine has proven its value in all terrains, at ranges from 5 to 500 metres. The even shorter "Commando" is

routinely the close-in battle weapon of choice for SOF throughout the world. Also part of Colts family is a 40mm grenade launcher, a 5.56mm light machine gun and 9mm submachine gun. All of which can be enhanced to complete any mission - day or night with accessories designed around what is already considered the best 5.56mm service weapon in the world.

COMET is located in Bremerhaven, Northern Germany and is a 100 percent affiliate of the Diehl Group in Germany. COMET concentrates on two business areas:

**1. Battlefield Simulation:**

Today's cost and environmental considerations give live simulation great importance in many aspects of military training.

Pyrotechnic simulators allow cost effective and safe training with weapons and equipment by realistically simulating the effects of weapons and munitions.

Modern Target Engagement Systems more often use Pyrotechnics to meet ever increasing demands for realistic training.

COMET offers weapon effect simulators for all live training scenarios to include training for Urban Operations.

**2. Portable Explosive Mine Field Breaching Systems:**

Proliferation of land mines and unexploded ordnance (UXO) represents a high risk.

Relief and military forces confronted with them need adequate equipment to cope with this threat.

Light, portable and readily available means are needed. COMET Portable Explosive Mine Breaching Systems (PEMBS) are the solution of choice.

Comtech Systems, Inc. Specialises in design, integration, supply and commissioning of turnkey satellite networks, over-the-horizon microwave (troposcatter) and line-of-sight microwave systems. Comtech Systems is a global leader in troposcatter systems and offers the most advanced and highest capacity digital troposcatter modem for beyond the horizon radio systems. Comtech's digital tropo modem is recognised as an industry standard. Located in the Orlando, Florida metropolitan area, Comtech's modern facilities contain all the resources necessary to engineer, design, manufacture and support state-of-the-art communication systems for customers worldwide.

Our parent, Comtech Telecommunications Corporation, New York, conducts its business through three complementary business segments: telecommunication transmission (VSAT and beyond the horizon microwave), mobile data communications (mobile tracking and messaging), and RF microwave amplifiers (electronic warfare, medical, satellite, and testing). Comtech Telecommunications is a publicly owned corporation and trades on the USA NASDAQ national market under the symbol CMTL.

Contact: P. J. Gulliford/H. J. Parsley

CQC specialises in Load Carrying, Sleeping and Personal Protective Equipment.

CQCs products enjoys an enviable reputation and are manufactured to customers own specifications. These products are not only in use with the British Army, but with defence forces worldwide.

CQC are willing to undertake any textile work, which forms part of the soldiers' basic equipment.

Over recent years, many requirements have arisen for bespoke carrying systems, which have been well received. We work with Armies worldwide to develop products to the end users exacting requirements.

CQC will design, develop and carry out long or short production runs either directly for a defence ministry, a sub-contractor or to an appropriately approved defence supplier.

E-mail: j.p.tiernan@cranfield.ac.uk  
Contact: Mr. Jack Tiernan, Research Officer

The Ammunition Systems and Explosive Technology Group (ASET Gp) of Cranfield University is based at the Defence Academy of the United Kingdom, Shrivenham, England.

It is the aim of the Group to progress the understanding of Explosive Method of Entry (EMOE) as a tool for Police and Military Operators.

The early military concept of an Operator making a generic charge has been replaced with extensive knowledge of charge capabilities, placement, blast over pressure, noise and blast mitigation, target reconnaissance and an understanding of when to revert to standard MOE; that is the purpose of our training courses.

We have trained members of the British Police Service in these techniques and now seek to expand our student base worldwide.

All training can be conducted either in England or in the host country and the generic course encompassing MOE with EMOE can be tailored to fit local requirements.

**CycloMedia Technology BV**

PO Box 65, 4180 BB, Waardenburg, The Netherlands  
Website: www.cyclomedia.nl

Contact: Paul Bosman

CycloMedia was founded in 1989. The company owns a family of technologies, known under the name CycloMedia®.

For over 10 years now, CycloMedia has been the active and undisputed market leader in the field of major optical registrations both in the Netherlands and abroad. Quality, innovation, reliability, service and continuity (in location and time) characterise both the company and the product.

CycloMedia has developed a method with which it can make large amounts of fisheye photos of (urban) landscapes in a quick and efficient manner. All objects and locations are registered systematically from the public highway within your municipalities, districts and provinces. These 360 photos or cycloramas are filed in a photographic database. This supplies you not only with a complete and realistic image of the objects you require, but also of the complete area surrounding them. A 360 photo database from CycloMedia provides you with completely new ideas regarding your work. Among other things, it helps you to improve the quality of your decisions and communication and saves you a lot of time.

Thanks to the geometrical basis, it is not only possible to measure within cycloramas but also to integrate a cyclorama with other spatial models, such as maps (GIS), designs (CAD) and administrative tables (R-DBMS) or Virtual Reality.

Visual Reality is a synergetic combination of all of these spatial models and offers an informative and realistic impression of our geographic environment. Create your own visual reality with Cycloramas.

The result is the best of both worlds: the logic of an abstract model (GIS, CAD, databases) with the realistic appearance of an optical model. The result is already created by Cebra.

Cebra  
Cebra (Center for Electronic Business research & Application) is specialised in new technology for the construction and exploitation of interactive multi-user virtual worlds that can be used over the Internet. For the construction of 3d computer models of existing buildings, Cebra is utilising the panoramic photo material, produced

by CycloMedia of big part of the all cities in The Netherlands. For new buildings the design material of the various architects are used.

Virtual worlds are dynamic and require a large amount of data-storage. Cebra designed a Virtuocity platform. Virtuocity is based on a central server architecture combined with relative thin client systems, on which a small web browser on the virtual worlds is functioning. The requirements imposed on client systems are considerably lower and synchronisation problems are virtually absent. The virtual world, being the core of the application, is operational completely on a central server. This world is described by a so-called "dynamic scenegraph", describing the structure and characteristics of all objects and current users in the virtual world. Based on the position and viewpoint of a single user in the virtual world, parts of the scenegraph, and other information such textures and so on, are exchanged between the server and the given user. The results of the navigation of the users are input for the server engine to compute the next state of the world and its users. Communication between server and clients is very much optimised.

The structure of the dynamic scenegraph and the advanced algorithms used to exchange data between server and clients, dependent on bandwidth and client performance, form the key of the innovation. This approach makes physical distribution on a CD obsolete and allows for operating Virtuocity applications over low-end broadband environments, with relatively small client systems on a 7 days a week/24 hours a day basis.

The European Commission recently nominated Cebra, on advice of an international jury, for the prestigious "European Information Society Technology Prize 2004". Cebra has been selected out of 430 companies from 29 countries.

Daewoo Heavy Industries & Machinery Ltd. (DHIM) has

been emerged as a major supplier of armoured vehicles in the world market. DHIM supplied the Malaysian Army with Korean Infantry Fighting Vehicle (KIFV) and its family vehicles over hundred units in early 1990s, and some of those vehicles were successfully operated in Bosnia for peacekeeping mission. This successful result is known to have come from DHIM's competitive price, full-scale of after-sales logistics support as well as outstanding performance compared to its competitors'. Furthermore, DHIM is also in stronger position to transfer technology for manufacturing and/or maintenance of the vehicles without any restriction from foreign countries, because they were indigenously designed and developed by our own technology.

DHIM has been manufacturing, as a specialist, thousands of vehicles including its family vehicles over the past 20 years.

### Major Products

- Improved Korean Infantry Fighting Vehicle (K200A1)
- Korean Armored Fighting Vehicle (KAFV)
- Air Defense System, "CHUN MA"
- 30mm self-propelled anti-aircraft gun system, "BI HO"
- Next Infantry Fighting Vehicle
- Upgrade Program for Light Armored Vehicle
- Armoured Wheeled Vehicle(6\*6)
- Multi-purpose Armoured Wheeled Vehicle(4\*4)

Daewoo International operates a global network of over 120 sites to provide clients and consumers around the world with the finest quality products at highly competitive prices. Through this network, we link suppliers and purchasers in 165 nations in more than 3,500 products for export, import, barter trade, tri-lateral and multi-lateral trade, and special trade programs.

Daewoo International, with its highly sensitive trade network, accesses the very latest in all trade information to provide clients with expanded trade, sales and

marketing opportunities. This network includes, in addition to our own branch offices and subsidiaries around the globe, our partners in nations around the world who provide up-to-the minute information, as required, on everything from the cost of raw materials to trade procedures and regulations in each nation.

### Project Organising

Daewoo International's extensive experience and world-wide network of contacts guarantee your success in a wide scope of programs in resource development, the construction of plants and other vital industrial and infrastructure areas. We have the resources to organize trade, finance, development, engineering and manufacturing support as well as facilities, basic and sophisticated production processes, advanced technology, and managerial skills, all tailored to meet your specifications.

### Resource Development

Daewoo International, aware of the growing prominence of resource development projects, utilises its global network and information gathering capabilities in a host of investment programs around the world, including ones in crude, natural gas, sugar, uranium, and mining. The company is already reaping consistent benefits from development investments in oil and gas exploration, and from development projects in several nations.

Defense Asia is the gateway to the Asia defence market with its great success on the last series in 2004. It is organised by ROK Army and strongly supported by Korea Ministry of National Defense, Agency for Defense Development (ADD) and Korea Defense Industry Association.

It has much more significance to be held in Kye-Ryong, military-oriented region where the tri-services headquarters, Armed Forces Staff College, Consolidated School of Army, School of Aerospace, School of Air Defense, Army Signal School and core Research Centers of ADD and Aerospace Research Institute are located nearby.

“Defense Asia 2006” truly provides you with great opportunities as below;

- One to One Meeting with core decision makers

- Strategic diplomacy  
(Meeting with VIPs and Military commanders from all around world)
- Better understanding of the latest technology of defence industries & State-of-the-art equipments and ground weapon systems
- \* Exhibition
  - Indoor 10,000 sqm
  - Outdoor 5,000 sqm
  - Chalet 10 units
- \* Conference
  - Speech of invited celebrities from all around world
  - Presentation of "Trends of World Defense Industry"
  - Presentation of "Korean Defense Policy" by ROK Army headquarters
  - Introduction of cutting-edge equipments and technologies from outstanding companies
- \* Live demonstration
  - UAVs
  - Armoured vehicles
  - Helicopters
  - Battle tanks

DMD, division of Armscor Business is mandated through the Armscor Act, to dispose of redundant, excess to requirement/ obsolete stock to the best advantage of the state.

DMD follows strict government regulations enforced by the NCACC in execution its duties. It is imperative for DMD to comply with the Non Proliferation of Small arms as per the regulations and agreements signed by government.

The sales process of these redundant materiel can either be through direct sales, which is mostly Government to Government, or it could be through government representatives. DMD also uses the tender process. It can be local tender or international tender. Local sales are conducted by means of replacements.

Detection Monitoring Technologies L.L.C. (DMT) is a leading provider of area surveillance and intrusion monitoring systems. DMT develops advanced intrusion detection radars and provides engineering and integration services for enterprise level physical security applications. DMT specialises in the design and production of small lightweight radar products and the integration of these radars with other sensors to provide a complete physical security solution. DMT also provides consultation in the areas of sensor performance and Radar Cross Section (RCS) modelling as well as advanced design and testing.

#### DMT Specialties include:

- Design, Production, Integration, and Installation, of Complete Security Systems for Commercial and Government Applications;
  - o Radar
  - o Cameras
  - o Infrared and Thermal Sensors
  - o Integrated Sensor Suites
- Radar Design and Manufacturing including;
  - o UHF to 20 GHz Frequencies
  - o UWB (ultrawideband)
  - o Affordable Low-Cost Custom Designs
- Radar performance assessment, including
  - o RCS (Radar Cross Section) Modelling and Measurement
  - o Systems Engineering, and Simulation
  - o Design and build of mechanical machines (including low-RCS designs)
- Simulations
  - o Physics Based Modelling
  - o Windows-based Simulations

#### DMT Products:

Area Intrusion Monitoring System – “AIMS”

AIMS Fixed-Beam is a perimeter-only security system

with fixed (non-spinning) antennae. Up to 4 antennae can be pointed to any direction simultaneously.

AIMS Fast-Scan is a volumetric security system. Perimeters and the space within are blanketed with extremely low power energy that bounces off intruders. These reflections are detected by the sensor and the user is alerted. It spins 360 degrees and has a range of approximately 1 km for human detection.

#### AIMS Airborne

AIMS Airborne is a lightweight X-Band RADAR deployed on aerostats, airships, and UAV's to provide long range surveillance and is integrated with other sensors for a complete surveillance solution.

For more than 40 years Diehl Remscheid has been developing and producing tracks for armoured vehicles. We actually focused on nothing but the track. This clear commitment enabled Diehl Remscheid to establish all core competencies like development, production, quality assurance and after sales service in-house.

Thanks to these capabilities Diehl Remscheid is seen as the world's leader concerning technology and quality. Diehl Remscheid offers its clients customised and future-oriented products, the so called System Tracks.

Beside the German Bundeswehr, whose tracked vehicles are fitted exclusively with Diehl System Tracks, we supply tracks to customers throughout the world. Our clients are not only located in Europe, but also in North and South America, the Middle East and Australia.

For every conceivable vehicle in the world, the following holds true: Either we have a track in stock or we'll develop it within six months!

Diehl System Tracks – the solution for all tracked vehicles worldwide!

domo designs and manufactures digital, wireless video and data links for sale and distribution to Military and Law Enforcement markets all over the world.

Domo will be demonstrating two products at IDEX; WAVCell and SOLO.

WAVCell is a multi point-to-point mobile video system allowing you to simultaneously receive video pictures from up to eight individual mobile transmitters (including combinations of body worn and vehicles transmitters that can be ground or air and manned or unmanned). A Base Station receiver, along with web browser control software lets either a mobile or fixed command centre monitor, as well as control, the operation of each transmitter using the transmitter's return channel. The Base Station receiver can output pictures for satellite uplinks, microwave links, or IP network transfer. Security is enabled through the use of AES scrambling.

SOLO is a point-to-point mobile link transmitting full frame rate, high quality video across non line of sight scenarios.

Defence Services Asia (DSA) is one of the world's most professionally organised defence and security shows with the purpose of offering global manufacturers and services providers direct access to top level defence experts and government security decision-makers.

DSA is also fully supported by the Malaysian Ministry of Defence, the Malaysian Defence Forces and the Royal Malaysia Police.

DSA has established a reputed track record of more than 18 years and has gained the confidence and support of all the top defence companies worldwide.

Currently ranked the largest Defence and Security event in the Asian defence and security calendar, DSA will remain the defence and security industry hub for the Asian region.

DSA 2006 scheduled for 24 – 27 April in Kuala Lumpur will be more comprehensive where it will once again feature the most sophisticated hardware and electronic warfare in land, air and sea defence and law enforcement to cater to the world's increasingly demanding security requirements.

Website: www.dsei.co.uk

DSEi is now the largest and fastest growing international tri-service defence exhibition in the world, and next takes place 13-16 September 2005 in London.

DSEi 2005 is set to be 30 per cent larger than the extremely successful DSEi 2003, with the international content continuing to increase and many new national pavilions being represented for the first time.

DSEi works closely with the UK MOD to attract and organise top quality foreign delegations and senior visitors. It meets the need of industry to promote their full capability in a business environment for the defence and security supply chain. From the large prime contractors to the smaller second and third tier subcontractors, the whole defence industry is uniquely catered for at a single show.

The last show in September 2003 featured 973 international exhibitors who were visited by over 20,000

bona fide defence visitors, including 79 foreign delegations from 56 countries.

E-mail: marlie.schmitz@dsm.com  
Website: www.dyneema.com  
Contact: Mrs. Marlie Schmitz, Communication Assistant

DSM Dyneema is the inventor and manufacturer of Dyneema®, the world's strongest fibre.

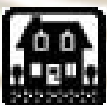

Dyneema® is a superstrong polyethylene fibre that is widely used wherever security, strength and light weight are required. It is used in bullet-proof armour and in protective clothing for law enforcement agencies and the military. Dyneema® is also a key component in ropes, cables and nets for the fishing, shipping and off-shore industries, safety gloves for the metalworking industry and fine threads for sports and medical applications. This remarkable polyethylene fibre is 15 times stronger than steel and, weight-for-weight, is 40 per cent stronger than competing aramid fibres. Dyneema® floats on water, and is highly resistant to abrasion, moisture, UV rays and chemicals. As a result, it has an almost unlimited range of applications, providing maximum strength and security for minimum weight.

E-mail: press@eads.net

EADS is the largest aerospace and defence company in Europe and the second largest worldwide with annual revenues of € 30.1 billion. EADS is a market leader in defence technologies, commercial aircraft, helicopters, space, military transport and combat aircraft, as well as related services. Its family of leading brands includes the commercial aircraft maker Airbus; Eurocopter, the world's largest helicopter manufacturer; and the joint venture MBDA, the world's second largest missile company.

EADS is also the biggest partner in the Eurofighter consortium and heads the A400M military transport aircraft programme.

Corresponding to the product range, the company is subdivided into five division: Airbus, Military Transport Aircraft, Aeronautics, Space and Defence and Security Systems.

The company has around 115,000 employees mainly in France, Germany, Great Britain and Spain. EADS has been a long-standing partner with the Gulf Cooperation Council states, including the United Arab Emirates, and plans to develop its partnership policy further for future programmes.

EDO provides military products and professional services to the United States, United Kingdom, and other allied governments, and their prime defence contractors.

EDO focuses on systems and subsystems that are integral to the success of long-term military platforms,

such as the B-1B bomber, the F/A-22, the Joint Strike Fighter, and the Los Angeles and Virginia-class submarines. EDO is a technology-driven company, with core competencies in a wide range of critical defence-mission areas.

At IDEX 2005, EDO is showcasing its aircraft suspension and release systems, most notably the BRU-57, a Twin Store Smart Weapons Carriage System. The BRU-57 allows the F-16 to double its "smart" weapons load out, providing a true force multiplier for the world's Air Forces.

"Electromashina" JSC is a leading enterprise of the Russian military industry in the field of design and manufacture of electric equipment for armoured vehicles.

We boast our over 60 years of extensive experience in commissioning manufacture of newly developed products as well as upgrading of serial equipment, including the following:

- fire, engine, TX control systems;
- fire extinguishing systems;
- warning systems;
- electric motors etc.

“Electormashina” JSC proposes the following tie-up for electric equipment maintenance and repair:

- Shipment of electric spares in the form of FF electronic units and actuators (electric motors, electromagnets, sensors etc.);
- Shipment of illustrated electric parts catalogues and repair manuals;
- Shipment of special purpose equipment and tools for repair, diagnostics and adjustment;
- Shipment of spares as per catalogues (FF, CKD and SKD);
- Customer's staff training in maintenance, reconditioning and overhaul of electric equipment.

Website: [www.elettronica-elt-roma.com](http://www.elettronica-elt-roma.com)

Contact: Mr. Gianni Carlini

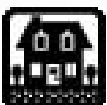

ELETTRONICA, since 1951, is specialised in the design, development and manufacture of Electronic Warfare systems: RWR, ESM, ECM and ELINT equipment for naval, airborne and ground applications. Single stand-alone units to complete sophisticated integrated systems are in service with the Armed Forces of 28 nations in five continents.

ELETTRONICA produces the first airborne fully solid-state ECM system, destined to the Eurofighter Typhoon, and is developing the first naval fully solid-state system for the Horizon Frigates and the new Multi Mission Frigates for the French and Italian Navy.

The Company also designs and develops dedicated software, training aids, automatic test benches, logistic support facilities, as well as special and key electronic components and sub-assemblies (DRFM, Digital Receiver, RX/TX Solid State module, MMIC, ASIC).

ELETTRONICA has been selected by the United Arab Emirates (UAE) Navy to supply the naval ESM suite, belonging to ELETTRONICA's SEAL family of ESM systems, for the Baynunah class corvettes and for the retrofit of other existing ship classes.

A proven record of successful international collaborations with platform manufacturers and other electronic industries have led to the definition and implementation of important systems such as the E.W. suites for the Horizon Frigates, the new Multi Mission Frigates, NH-90, EH-101, Eurofighter Typhoon, Tornado IDS/ECR, Mirage 2000, AMX.

Contact: Dania Sanches Machado

With headquarters in São José dos Campos, Brazil, Embraer is a global company with 35 years of experience in designing, manufacturing, selling and supporting aircraft for the airline, defence and business aviation markets.

Embraer is the world's leading manufacturer of commercial aircraft up to 110 seats. Since 1996, Embraer has produced and delivered more than 800 ERJs to more than 30 airlines in 20 countries. Aircraft of this family have a rugged, proven structural design developed specifically for regional airline missions.

In 1999, Embraer launched the EMBRAER170/190 family, comprised of four new-generation E-jets designed. First in the family, the 70-seat EMBRAER 170 successfully entered commercial operation in Europe and the United States in 2004.

Embraer is also present in the Corporate and Defence markets.

While its Legacy business jet flies in 11 countries, Embraer's Intelligence, Surveillance and Reconnaissance (ISR) aircraft are in operation in Brazil's Amazon Surveillance Program (SIVAM).

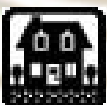

In August 2004, Embraer's ERJ 145 platform was chosen by the U.S. Army and Navy to carry Lockheed Martin's intelligence systems in the Aerial Common Sensor (ACS) program.

ESG is one of the leading German companies for the development, integration and operation of electronic and IT systems. It accompanies the entire lifecycle of complex high-tech products and is a longstanding partner of the German Armed Forces, public authorities and industry. For these customers ESG provides services in the areas of systems engineering, logistics, training, consultancy and technical services. The main focus are automobile electronics, aeronautical engineering and information technology. ESG develops and services electronic systems for aircraft, helicopters and land vehicles, plans and integrates command, control and information systems and supports military customers with training and logistic services. Through its work for military as well as for industry customers, ESG is able to transfer knowledge between these two areas. With its high process, methodical and professional competence and know-how, ESG is a permanent and responsible part of the value chain of its customers.

ESRI's ArcGIS provides the critical defence infrastructure

that provides computer support for these location-based decisions. Defence organisations around the world are recognising the importance of GIS beyond the traditional confines of specialist usage. C4ISR systems of all kinds from Command and Control to Sensor Management systems are being constructed on a foundation of the ArcGIS Platform.

No other technology allows for the visualisation of terrain data, overlay information, and administrative or business data as effectively as GIS. The spatial display and analysis tools of GIS are ideal for satisfying the myriad of military demands for efficient data access and decision support. These traditional uses of GIS are now expanding well beyond decision support systems to include real-time track management.

ESRI's exhibit at IDEX will demonstrate the wide range of capabilities in today's ArcGIS platform. Demos will include Military Analyst, Military Overlay Editor (MOLE 2.0), Spatial Analyst, 3D Analyst, and ArcGlobe.

ESS, Support Services Worldwide is the premier global provider of specialist foodservices, facilities management and logistics. As a flagship enterprise of Compass Group PLC, the world's largest foodservice organisation, ESS operates Defence, Remote Site and Offshore activities in almost 60 countries with over 30,000 employees and a turnover exceeding \$2 billion.

ESS leads the market in quality of services provided, service innovation, community development and employment opportunities. We have international experience in delivering 60 core services that range from foodservices, retail and leisure activities to total camp management. In conjunction with our 'Best in Class' partners, our capabilities expand to 90 core competencies including camp construction and mine

clearing.

ESS offers the military client value for money and a true one-stop shop for all support activities. The Commander will have peace of mind knowing support services will be operated effectively by a team with field expertise providing superior output to meet shared objectives.

ESS has revolutionised the way military, police, and fire/rescue personnel view eye protection. Purpose-built goggles, eyeshields, and sunglasses feature ballistic impact resistance, proprietary anti-fog technology, and the highest levels of safety, performance, and comfort. American, British, and Australian armed forces (among many others) have already selected ESS products for their soldiers. Innovative ideas, patented designs, and unmatched production capacity position ESS as the world's premier manufacturer of eye protection systems (NSN and laser protection available).

TARCON®  
TARGET CONCRETE

You can now use live rounds in your urban warfare training without the risk of ricochets or shoot-throughs thanks to TARget CONcrete (TARCON®).

TARCON® is a safe and cost effective bullet containment system which can safely absorb bullet impacts from thousands of rounds of ammunition. By varying the density and the thickness of TARCON®, it can be used effectively against a wide range of ammunition including, but not limited to:

- 5.56 x 45 mm.
- 7.62 x 39 mm.
- 7.62 x 51 mm.
- 7.62 x 54 mm.
- 9 x 19 mm.
- 12.7 x 99 mm.

TARCON® has almost unlimited applications including, but not limited to:

- Bullet traps and barriers
- Firing range backstops
- Erosion control structures
- Protective walls and barriers
- Safe realistic rubble
- Live-fire shoot-houses
- Grenade houses
- Back-up walls
- Three-dimensional targets
- Protective structures

ETEC – Your Partner for Ceramic Light-Weight Composite Armour

ETEC supplies high-quality armour ceramics, based on alumina and silicon carbide, for body protection and vehicle upgrades.

Low surface weight, extremely tight tolerances and

synergistic advantages, combined with high performance backing materials result in a superior ballistic performance.

Product performance and quality are certified by numerous national and international armour projects - German Fox, M113, VAB, Dingo, Fennek, LAV, cabin protection for all kind of trucks, shelter protection shipyards, VIP cars, etc.

The intense cooperation between ETEC and worldwide leading system suppliers enables a constant product quality improvement and introduction of new materials into the market.

For vehicle upgrades, ETEC supplies ceramic layouts consisting of all kind of tile shapes according to customers' specifications. At the same time, within the range of body armour, ETEC supplies inserts based on curved multi-tiles as well as single and multi-curved monoliths.

Certified acc. to DIN ISO 9001:2000.

Contact: Dr. Andrea Ferrino, Export Manager

In 1870 Cesare Ferrino transferred the formula for waterproofing of fabrics to an industrial scale, a formula he had tested and perfected over the years.

It was a winning idea and the Ferrino's history started then, to be correct in the shop of Via Nizza 107, Turin, Italy. The production centre for oil skin, coverings army tents and an exclusive location for all those seeking out products made with state-of-the art technology. Since then Ferrino Spa has become an international point of reference for anyone who is looking for innovation, technology and quality.

However, the past is always a reference point, because today the success of our company is still achieved through the same values. The professionalism of its staff, carefully executed work methodologies, the scrupulous

selection of projects and final products. These are all individual chapters of a history that is continually evolving while remaining faithful to its origin.

Fiber SenSys is the world leader in fibre optic intrusion detection systems and perimeter security solutions. With installations at hundreds of sites around the globe. The fibre optic sensor is immune to electromagnetic interference, lightning, and wind effects, Military installations, airports, oil refineries, electric plants, water treatment facilities, chemical manufacturers, palaces, communications facilities, transportation centres, and many other applications worldwide have found that the combination of superior performance and intrinsic safety meet their requirements perfectly and cost effectively. Capable of custom tuning for the environment, the system is suitable for a wide variety of perimeters: fences of all kinds, walls, rooftops and buried detection zones are only a few examples. Powerful digital processors analyse sensor input to maximise detection capability and screen out unwanted signals such as traffic and environmental noise, Fiber SenSys offers the ultimate in intrusion detection capability for applications ranging from facility perimeters to secure data networks.

Fincantieri is one of the most important, diversified shipbuilding concerns in the world and the largest in Europe. The company, whose workforce numbers 9,500, is the world leader in the construction of cruise ships and large ferries and also has an important order book in the naval field.

The corporate head office in Trieste avails itself of a business framework which focuses on the company's reference markets in such a way as to draw Fincantieri increasingly closer to the needs of its customers.

Production is carried out at eight shipyards which report to three Business Units: the Cruise Ship Business Unit (headquartered in Trieste) for the shipyards of Monfalcone (Gorizia), Marghera (Venice) and Sestri Ponente (Genoa), the Merchant Ship Business Unit (headquartered in Trieste) for the shipyards of Ancona, Castellammare di Stabia (Naples) and Palermo and the

Naval Vessel Business Unit (headquartered in Genoa) for the shipyards of Riva Trigoso (Genoa) and Muggiano (La Spezia). The company has two design centres, one in Trieste (the largest in Europe) and one in Genoa.

Fincantieri's activities are further supported by its subsidiary companies which include:

- Isotta Fraschini Motori, headquartered in Bari, which works in the field of high speed, medium power diesel engines providing design, construction, sales and assistance;
- CETENA - the Centre for Studies of Naval Technologies in Genoa, which promotes and develops fundamental, basic and applied research in the field of shipbuilding and ship propulsion as well as in the marine sector in general;
- Orizzonte Sistemi Navali, a naval systems engineering company headquartered in Genoa. This company works as Prime Contractor on the definition, design, integration and marketing of surface vessel systems with a high technological and system content such as corvettes, frigates, destroyers and aircraft carriers, whose displacement is over 1,000 tonnes, both for the domestic market and overseas.

"Now a long time partner of the UAE and the IDEX exhibition, the Belgian company FN HERSTAL will exhibit one of the largest range of small arms and integrated weapon system.

Recently recommended as the new NATO PDW calibre, the 5.7 x 28mm system comprises the P90® submachine guns as well as the Five-seveN® pistols. New in the F2000 rifles family, the Tactical model offers improved modularity. Within the machine guns family, the 5.56 Minimi has once again recently proven its reliability and precision.

Shown for the first time in the middle-east, the ARROWS completes the family of mounted weapons. Remotely operated, it can be installed on vehicles, patrol boats or stand alone and offers unmatched accuracy and controllability, whatever the calibre, as it is available in 40mm LV,7.62 and .50 Cal, either with the M2 or M3 machine gun that shoots at the incredible rate of 1,100rpm.”

FNSS SAVUNMA S\_STEMLER\_ A.S. (FNSS Defence Systems Inc.) is the leading manufacturer of tracked Armoured Combat Vehicles (ACV) not only in Turkey but also in the whole region extending from the Balkans to the Middle East and Asia. FNSS is established as a joint venture between United Defence L.P. of the U.S. and NUROL of Turkey. FNSS made a strong entry into the Markets in 1988 through the manufacturing of Armoured Combat Vehicles in large quantities for the Turkish Army. The company is now developing a family of armoured wheeled vehicle manufacturing.

Following the completion of deliveries under this first contract, FNSS has signed an additional contract to meet the requirements of the Turkish Army. Production and deliveries under this contract continues. Meanwhile the company also has executed number contracts for export customers. FNSS has extended the scope of its activities and expertise to cover the modernisation of M113 family of vehicles and provision of logistic support and other technical services for armoured vehicles of all types and configurations. FNSS designs and manufactures different

variants of its ACV (Armoured Combat Vehicles) family of vehicles to meet customers' specific requirements and expectations. The variants are; Armoured Infantry Fighting Vehicles (with different turret options), Armoured Personnel Carriers, Armoured Anti-Tank Vehicles, Armoured Mortar Vehicles (fitted with 81 mm, 120 mm rifled or 120 mm smooth bore mortars), Armoured Command Post, Armoured Engineering Squad, Armoured Forward Observation, Armoured Recovery, Armoured Ambulance and Armoured Air Defence Vehicles. FNSS' Armoured Combat Vehicles have successfully operated under United Nations Peace Keeping Operations in Somalia and continue to operate in Bosnia and Kosovo. Vehicles thoroughly operated under combat conditions have won the praise of International troops.

The family of Wheeled Armoured Vehicles that FNSS currently develops has a range of 4x4, 6x6, 8x8 and 10x10. It will be a modular armoured wheeled vehicle to be offered to both domestic and international customers.

FNSS has AQAP-110 Industrial Quality Assurance Level certificate from the Ministry of National Defence of Republic of Turkey and ISO 9001-2000 Quality Assurance certificate from Lloyd's of the United Kingdom. These certifications depict the attitude of FNSS towards quality.

FR Aviation, along with FR Aviation Services, National Jet, National Air Support and joint venture companies, form Cobham plc's Flight Operations and Services Group. This group operates 150 aircraft worldwide, flying 124,000 hours annually. Its capabilities include:

**AIR WARFARE TRAINING SUPPORT**

- Electronic warfare training
- Radar & communications jamming
- Threat simulation – aircraft and missile
- Target towing for live missile & gun firing, and weapon evaluation

**MILITARY HELICOPTER FLYING TRAINING**

- Operation of the Defence Helicopter Flying School (DHFS)
- Single and twin engine, basic and advanced training
- Tri-service ab initio training
- Training is available to UK and overseas students.
- Comprehensive ground training suite, including Bell 412 simulator

**SURVEILLANCE**

FR Aviation offers a complete range of aerial surveillance services and has in-house capability for specialist aircraft role conversion.

- EEZ monitoring
- Fisheries & management
- Pollution monitoring
- Search and rescue
- Anti-smuggling
- Homeland defence

FSUE CSRI "Granit", founded in 1921, develops and supplies naval, ground and air-based integrated information control systems and radio electronic equipment to the Russian Navy as well as to several foreign fleets.

The main fields of activity of the institute are:

- On-board automatic systems for anti-ship missiles;
- Surface surveillance and target designation complexes;
- Ship-based and ground-based control systems;
- Control systems for anti-submarine defence.

Highly professional scientists and engineers allow "Granit" to create systems and equipment of XXI century. CSRI "Granit" is modern dynamically developing enterprise; we are ready for cooperation with domestic and foreign partners.

FUCHS ELECTRONICS THE WORLD LEADING  
ORDNANCE SUPPLIER OF ELECTRONIC FUSE  
ORDNANCE AND AIR WEAPON SYSTEMS

Fuchs Electronics is recognised and globally respected for its innovation and excellence as a supplier of electronic fuse ordnance, electronic air bomb fuses and pre-fragmented air bombs. It's capabilities include design, development and manufacture of electronic fuse ordnance, associated setting devices for all medium and large calibre tube launched ammunition, electronic air bomb fuses and pre-fragmented air bombs. All Fuse products, utilising the latest Digital technology, offer armed forces an effective and reliable way to upgrade the effective use of their medium to large calibre artillery, rocket, mortar, naval ammunition and air bombs. The range includes Electronic Point Detonation & Delay, Multi-Option, Proximity and Time fuses with associated Setting Devices, as well as Electronic Air Bomb fuses.

The MK80 series of pre-fragmented bombs provides the user with a more effective (pre-fragmented) capability as opposed to steel bombs.

Products are designed and manufactured in accordance to international accepted standards (MIL-STD, STANAG and ISO).

Gate Elektronik San. Ve Tic. A.S., since 1989, is specialised in giving depot level -onsite maintenance and repair to the military/industrial/civil electronic systems, avionics, etc. besides giving system integration and maintenance engineering services, software development services and electronic production services. Having an experience of 14 years in the business, Gate Elektronik is working in the defence industry with the scope of services including;

**-Electronic production**

-PCB design-Production & Assembly (Sub Assembly),  
Cable Harness, Fibre Cable Harness, Chassis  
Manufacturing

-Test & Measurement System, Back Plane Testing

**-Technical Service**

- In-house maintenance & repair
- Onsite maintenance & repair
- System Integration & Maintenance Engineering

- Software development
- Test Program Sets -TPS development & ATUs (Adaptors for Test Units)
- Flight Simulator software development

In its factory located in Sincan/Ankara Technical Service Laboratories, R&D Laboratories and Electronic Manufacturing Line of Gate Elektronik are equipped with high technology systems and equipment. System/Equipment/PCB manufacturing, assembly and LRU/SRU Test Program Set (TPS) developments are accomplished with 173 experienced and qualified staff in accordance to military workmanship with ISO 9001 Quality Assurance Certification, AQAP-120 Industrial Quality Assurance Certificate, Building Security and NATO Clearance Certification.

In METU-Technopolis facilities, Gate Elektronik is working

on many R&D projects and in year 2003 appointed as a nominated company to the technology success award at the 5th Turkey's Technology Awards which is jointly arranged by the Scientific and Technical Research Council of Turkey (TUBITAK), Technology Development Foundation of Turkey (TTGV), and Turkish Industrialists' and Businessman's Association(TÜSIAD) Besides more than 2,500 local customers, Gate Elektronik is giving reliable engineering services to NAMSA (NATO) and exports to the countries USA, UK, UAE, Russia, Norway, Japan, France.

The company's technical service department is capable to provide on the site and Gate Elektronik would be pleased to join its efforts with you for possible future projects and business opportunities both in Turkey and abroad as your reliable and qualified solution partner. Port-A-Cool® units, manufactured by General Shelters of Texas, S.B., Ltd., are completely self-contained, portable, evaporative cooling systems offering many versatile options for effective cooling when standard air-conditioning may be unavailable, impractical or cost prohibitive.

Operating on water and 110v (or 220v) of electricity or compressed air, Port-A-Cool® units perform at a fraction of the cost of standard air-conditioning. As hot air is pulled through the water-soaked pads, cold air is created by evaporation and dispersed by the fan, delivering as much as 15,000 cubic feet per minute of air flow an average of

20 degrees cooler than surrounding air and discharging that air over large areas. Direction of the flow of cool air may be controlled with ducting on the 16" models.

Port-A-Cool® units are available in four standard sizes, with hazardous location and 220v models also available. These models offer an affordable, effective and flexible solution to almost any cooling problem.

Goodrich Corporation's Electro-Optical Systems (EOS), located in Danbury, Connecticut, is a world leader in the design, development, and manufacture of precision optics and electro-optical systems and sensors for defence, aerospace, scientific, and commercial applications. As a supplier of laser warning equipment for more than 30 years, Goodrich has delivered over 2500 systems to armed forces in the United States and around the globe. This technology is currently in use on 1,600 helicopters in eight countries and 900 ground vehicles in two countries.

Goodrich builds laser warning sensors and systems for ground and aviation platforms. Threats from laser range finders, designators and beam riders can be located with

precision, with zero false alarm rates. Our expertise in developing total electro-optical systems solutions allows us to act as an integrator of defensive aid suites for military platform protection.

Goodrich products help to improve mission survivability for the war fighter. Visit us at booth 4114 to learn more.

GCS has its origins dating back more than 40 years. It has since evolved to become one of the major leaders in the design and manufacture of tactical Military, Communications Equipment and is part of a group of companies that is a frontrunner in the South African electronics industry. Our aim is to be the global leader in the engineering and supply of customised communication systems.

Our product range meets the requirements of the soldier, mobile, air and sea military forces, command posts, headquarters as well as governmental authorities, including embassies.

During 2001, the Swedish company Saab took a substantial share holding in GCS. The partnership is an important step in integrating GCS's technological skills and capabilities to address more sophisticated markets. The division's involvement in the Strategic Defence procurement Programme through the supply of communication systems for all the platforms to be supplied to the SANDF, further contributes to the internationalisation process.

GCS currently has two exciting product range in production. One is a family of tactical High Frequency radios known as the Phoenix, while the other is an airborne communications management system known as the ACMS. Both are based on cutting edge technology and have good potential for local and global sales.

GCS also supplies engineering and planning services to the suppliers and operators of telecommunications networks.

Gulf Defence Magazine, "The Defence Magazine of the Arab World", is the Official IDIEX journal. The magazine plays an active role in promoting IDEX throughout the Arab world and includes editorial on the build-up to the event and the latest news from exhibitors. The magazine is published bi-monthly and is distributed internationally, in GCC, and in all Arab countries.

Thousands of copies of the special IDEX issue, January 2005 edition, will be circulated at IDEX 2005 and will be given to all the Arab VIPs and delegations, exhibitors and visitor to the show, in addition to the worldwide circulation list.

With a carefully prepared list of editorial features written by renowned international experts, and an increased and audited circulation level, we believe that Gulf Defence Magazine in 2005 represents an excellent medium for the world's defence industry to reach the decision-makers in our region.

Since its establishment in 1959, HanKook Communication Co., Inc. has professionally produced communication and CBR (Chemical, Biological, Radiation) equipments for the defence industry and has contributed to national development and self-reliance of national defence.

With its first factory Seoul, HKC was founded with the objective of promoting the national communication equipment industry. In 1978, a second plant was opened in Incheon for mass production in order to efficiently produce and supply high quality communication equipments.

In particular, HKC has been designated as a professional (CBR) detection and valuation firm and as maker of automatic chemical agent alarm system which is supplied to the Ministry of Defence for improving fighting capabilities. In doing so, HKC is contributing to the national economy by saving valuable foreign currency as these systems substitute for imported system.

Furthermore, by obtaining the ISO9001 Certification, HKC has been officially recognised for its quality management and quality guaranteed system.

We are actively carrying out R&D for technology renovation and production of high value-added products.

Under the philosophy of mutual respect, sincerity and challenging attitude, HKC will continue to exert its full efforts in order to forward in the next generation.

Hellenic Defence Systems (EBO-PYRKAL) S.A. is a state owned manufacturing group of companies, which was established in 2004 by the merging of iHellenic Arms Industry SAi (EBO) and Greek Powder & Cartridge Company SA (PYRKAL)

EAS has an organisation structure consisting of the Defence Sector, the Civil Sector whilst also acquires three daughter companies, employing 2.300 people in eight plants.

The Defence Sector is engaged in the production of:

- Small Arms, Mortars and Cannons.
- Weapon Systems.
- Missile Systems and medium to large calibre Ammunition.
- Ammunition for small arms and metal parts of ammunition.

EAS has gained a reputation at home and abroad of the high quality and reliability of its products.

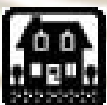

To assure the full conformance with requirements and specifications, EAS has built up and maintains a comprehensive and disciplined Quality System, complied with NATO standards AQAP-110 as well as international standard ISO 9001.

Concertainer® from HESCO Bastion Ltd has been a key component in providing Force Protection since the 1991 Persian Gulf War. Concertainer structures have been subjected to testing with charges up to 20,000lbs, and correctly configured, will mitigate the effects of truck bomb attack. It has also been tested and proven against small arms fire and RPG, and is used extensively in the protection of personnel, vehicles, equipment and facilities by all major military organisations around the world.

Concertainer is a prefabricated, multi-cellular defence wall system, made of galvanised steel Weldmesh and lined with geotextile. Its primary advantage over other force protection systems is its ability to utilise locally available fill material to rapidly construct defence walls and other structures with minimal manpower and resources. Units can be extended and joined together easily and rapidly to provide effective and economical structures tailored to the specific threat and level of protection required.

The Hirtenberger ammunition factory can look back on a 140-year tradition. Today, Hirtenberger develops quality and precision ammunition for 60mm, 81mm and 120mm mortars. In addition to the mortar bombs (HE, practice, WP-Smoke, TTC-Smoke, HC-Smoke, RP-Smoke, ILL and IR-ILL) the mortar weapon systems and 105mm & 155mm (ERFB-BT, ERFB-BB) howitzer ammunition from Hirtenberger is internationally well known. The product range is completed with the 105mm family of tank ammunition (APFSDS-T).

The HDS infrared illuminating mortar bomb (IR-ILL), our latest product, is considerably radiating infrared waves which enhance the night fight-capability providing unnoticed observation of the enemy.

In 2003, Hirtenberger concluded a production & marketing agreement with RUAG Ammotec (Switzerland/Germany) covering the small arms, law enforcement and infantry ammunition segment. HDS remains active in the marketing of infantry ammunition in its traditional markets.

LIMA 2005 MARITIME

LIMA 2005 MARITIME is a dedicated naval defence and maritime exhibition for the Asia Pacific region and boasts the full support of the Government of Malaysia and the Armed Services.

Into its fifth edition, LIMA 2005 MARITIME has firmly established itself in the world defence calendar and has become the exhibition of choice for companies looking to reach 30 percent of the world's future naval market, which the Asia Pacific represents. The recently concluded LIMA 2003 MARITIME saw nearly 10,000 trade visitors including specially invited official senior naval delegates from 34 countries. The event attracted 200 world-class companies from 18 countries, 82 warships and vessels of various categories. Highlights included daily vessel and equipment demonstration, international fleet review and warship visits and networking opportunities via specially programmed events.

Over RM 1 billion worth of defence business were concluded during the six day event December 6th - 11th 2005 - Langkawi Island, Malaysia. DON'T MISS IT!

### IATST

Tel: +971 2 6 330 150 Fax: +971 2 6 330 341

E-mail: nashind@emirates.net.ae

Contact: Dr. Jean Claude Courvieux

IATST is a company specialised in passing cables by an ingenious horizontal drilling system without trench avoiding long and costly civil works.

#### Applications are numerous:

- Electricity
  - Telecommunications, Fibre Optic
  - Water
- Etc

Our role is to pass under a road, highway or any others application without opening the area by digging a trench.

Our system could be used for 20 cm diameter up to length unit of 50m long which might be added each others.

It is faster, cheaper and much more comfortable for users.

### IB Supplies Pty Ltd

45 Lakewood Boulevard, Braeside, Victoria 3195, Australia

Tel: +61 3 9587 4465 Fax: +61 3 9587 1786

E-mail: sales@ibsupplies.com.au

Website: www.ibsupplies.com.au

I.B. Supplies is a young and dynamic company whose managing Director has been supplying equipment to the Defence Forces for over 30 years.

This Melbourne-based company has the ability to adapt its products to many uses and its flexible and "can-do" attitude make it easy to deal with on all levels.

I.B. Supplies has a wide and varied range of equipment purposely designed for the Defence Forces. I.B. has supplied equipment for the Australian Air Force, Australian Army and the Australian Navy as well as some overseas forces.

The company specialises in deployable equipment ranging from its G Series collapsible shipping boxes to shelters, workshops, command centres and even full gymnasiums, as well as Explosive Ordinance Disposal (EODs).

Our EODs are very compact for transport and can be easily deployed to a full-sized unit in a matter of minutes.

Our shipping boxes have many uses and have been much sought after by Australian forces in recent conflicts around the world.

#### G 32 & G66 Collapsibles.

The G Series Collapsible Shipping Containers are the secure method for shipping goods and equipment with security. H/Duty construction is combined with unique collapsible design, to allow enclosed shipment to the destination with return of broken-down containers for re-use.

This unique product provides a standardised shipping container system that provides both security and ease-of-use for the movement of all types of goods. The unit size of the containers ensures close packing within larger standard containers where consolidation for movements is required.

Temporary Storage - the G Series shipping containers are the versatile solution to temporary storage and parts warehousing upon delivery of the shipment.

Containers can have their front panels removed before stacking to become a temporary supply depot.

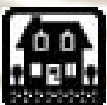

Available on Standing Offer No.0302-224-32

IB Supplies also has a range of compact all-terrain vehicles that can be adapted for many specialised purposes including cable laying, communications and covert operations.

Our deployable container systems are capable of transport by the C-130 Hercules aircraft as well as Unimogs and most other road transport vehicles.

Another I.B. speciality is the G66 Catering Module which has the capacity to feed from 200-2,000 personnel in every field application. The catering modules are fully self-sufficient and can be deployed easily in containers.

Between May 3 – 5 2005, the eighth year of the International Exhibition IDET will take place in Brno (Czech Republic). The first year of IDET was organised in 1993. During the 11 years that passed from then, the world around as has changed radically, as have the security risks, and the importance of the defence technologies trade fair has risen substantially.

During the 7 years in which it has been organised, IDET became one of the most prestigious and well – recognised events in this field. It has become a rule for IDET to be the biggest European exhibition of defence technologies in the year when it takes place.

IDET in 2003 presented 328 companies from 24 countries of the world at the total exhibition area of 29, 950sqm. The trade fair was visited by 21,797 professional visitors and tradesmen from 62 countries, and 431 accredited journalists.

#### Indian Defence Yearbook

25 Janpath Bhavan, PO Box 151, New Dehli 110001, India

Tel: +91 11 237 52877 Fax: +91 11 237 52878

E-mail: [idyb@vsnl.com](mailto:idyb@vsnl.com)

Website: [www.idyb.com](http://www.idyb.com), [www.idyb-yearbook.com](http://www.idyb-yearbook.com)

Contact: Mrs Rainu Mehra, Response Team Manager

Indian Defence Yearbook is an authoritative publication dealing with Indian security matters, strategic and technological independence, modernisation plans of the armed forces, defence budgeting, defence technology, progress in defence R&D, production, weapon systems introduction, force levels and related subjects. Now in its 10th year of publication, the inaugural issue was released in June 1997 by the President of India. Besides attracting a large readership amongst top government and defence officers, IDYB has been recommended, year after year, by the Service Headquarters of the Indian armed forces for study by officers for their promotion examinations and career competitions.

IDYB has emerged as a powerful and effective medium,

for domestic as well as overseas advertisers of the defence industry, to reach the specific target audience that they want so as to expand their business in the Indian subcontinent. IDYB 2006 will be published on 1 January 2006. Space reservation is open up to 1 December 2005.

The Editor, Lt Gen (Retd) RK Jasbir Singh, is a former Military Secretary, of the Indian Army, who commanded 15 Corps in Jammu and Kashmir.

IDYB is also looking for marketing arrangements for the Yearbook in Europe, USA, Russia and South Africa and for advertising agents/concessionaires in those regions.

E-mail: [instalaza@instalaza.es](mailto:instalaza@instalaza.es)

Website: [www.instalaza.es](http://www.instalaza.es)

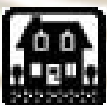

Contact: Mr Santiago Tazon

INSTALAZA SA is a privately owned Spanish company with more than 50 years in the defence market. The company is highly specialised in the design and production of infantry weapons and ammunition. The capability of Research & Development is an essential element, since Instalaza have developed its range of products using its own designs and patents.

INSTALAZA SA is exporting around 70 percent of the production and its systems are used by more than 30 armed forces all around the world.

The most well known products of Instataza are the rocket-launchers: the C90 and ALCOTAN shoulder-launched weapon systems with different warheads (anti-tank, anti-bunker, dual purpose, etc.).

Other highlights are the Alhambra Hand Grenade with

mechano-electronic fuse and the MAT-120 mortar cargo round with sub-munitions incorporating self-destruct and self-neutralisation (0.0 percent duds).

The design and production systems have been certified ISO 9001:2000 and AQAP 110.

Considered among the leading defence equipment manufacturers in Pakistan, the Institute of Industrial Control Systems (IICS) is a full fledged research and industrial complex. It is producing some of the most valuable weaponry and defence equipment for the armed forces, besides emerging as a formidable exporter of such products. These include missiles, laser and opto-electronic devices and other related arms and ammunition. In the field of missiles, after the successful production of ANZAR MK-1 and ANZAR MK-2 for more than one decade, IICS now has plans to manufacture a new generation of man-portable, shoulder-fire, anti-aircraft, SAM missile "ANZAR MK-3". This version has the night vision capability and has an effective anti-jamming capacity against every kind of artificial IR jammers and IR flares in the course of firing and attacking. IICS also produces anti-tank guided missile "BAKTAR SHIKAN" with a hit probability of more than 90 percent. Known for their accuracy and technical excellence, all these missiles are time-tested and reliable weapon systems. In addition to these systems, the IICS-made Laser Rangefinder, Laser Actuated Target, Laser Threat Sensor, Laser Aiming Device, High Speed Aerial Target Drone (HISAT-DK), Automatic Fire Control System for AA gun and Thick Film Hybrid Circuits production also hold great promise in the international market for their highly precise ranging and functioning.

Tel: +359 2973 39 70 Fax: +359 2973 39 70  
Contact: Stefan Vodenicharov

The Institute of Metal Science (IMS) was founded in 1968 and is one of the leading institutes in the Bulgarian Academy of Science. The research activities of IMS are connected with design and development of defence equipment orientated to products and systems which provide the national security against incursion by land, sea and air.

The following trends of advanced and efficient high-tech defence products are of interest for the potential clients:

- . New generations of anti-invasion mines designed for building mine fields on depths from 2m up to 10m and 30m;
- . New generations of non-contact fuses for anti-invasion and anti-tank mines;
- . Magnet diversion mines on land and under sea;
- . Systems for neutralisation of high speed crafts and underwater divers;
- . Anti-helicopter mines;
- . Microwave guarding systems for various targets;
- . Systems for smoke field control;
- . Combined armours for heavy and light armour vehicles.

The achievements of IMS and its research and technical experience enable rendering know-how and licenses as well as manufacturing new high effective products and defence systems of excellent quality, technical and technical characteristics.

Contact: M. Bonifay, Marketing Manager

IRDAM produces meteorological systems.

In the military field, IRDAM manufactures two models:

For Main Battle Tanks: model 2156 + CTSM

The purpose of this system is to insure the highest hit probability with the first round.

The system corrects the ballistics of the first projectile in function of:

- Wind direction, wind velocity, pressure and temperature for deviation
- Ammunition temperature for over / undershooting

### For NBC vehicles: model 5156

This model gives the same information as 2156 plus relative humidity.

#### Advantages of both models:

- Very accurate
- Very rugged
- Stringent Quality Control
- Service very close to the Customer.

### Italian Textile Solutions LLC

P.O. Box 52587, Abu Dhabi, United Arab Emirates

Tel: +971 2 585 4199 Fax: +971 2 585 4642

E-mail: f-ifram@its-emirates.com

Website: www.binjabr.com

Contact: Mr. Farhan Ifram

With God's Grace and under sponsorship of Brigadier H.H. Sheikh Nahyan Bin Zayed Al Nahayn, Commander of the Royal Guard, Italian Textiles Solutions Factory was inaugurated on the 13th July, 2002. The main objective of establishing such factory is to meet the requirements of the U.A.E. Military and other security forces, in the first place. The CCC states in the second place of all different types of uniforms and provisions. While developing the idea of establishing the factory, our objective was to

occupy a leading position in the area in the field and manufacturing military uniforms and provisions. To fulfil that, we availed all the material and technical capabilities and carefully set up plans. In order to reach the contemplated objectives, it was essential to find a partner with an international experience in such filed so a contract was concluded with an Italian partner who is an expert in the field of inanufacturing military uniforms and the outcome was the Italian Textiles Solutions L.L.C.

Due to the continuous support by GHQ Armed Forces in U.A.E. we were able to build such edifice as pre-planned for we hope that this humble effort will be a value added to the achievements in the State and on International level.

Jane's is the world's leading provider of defence, security and transportation reference, news and analysis. Governments, militaries and manufacturers rely on Jane's information for its accuracy and authority. With over 200 information sources available online, on CD-ROM or in print, Jane's offers you a most comprehensive range of information services and solutions. New for 2005 is Jane's Defence Forecasts – Military Aircraft Programmes. A unique and extensive database that tracks and projects military aircraft upgrades and procurement programmes up to 20 years in advance. It covers over 600 airframes currently in service or in production across 64 leading nations, plus NATO. We will be demonstrating this exciting new service at the Jane's stand throughout the duration of the show, why not stop by and see just how good Jane's Defence Forecasts is for yourself. We will be giving out free demonstration CD's of the service and our expert staff will be on hand to answer any of your questions.

 Contact: Deniz Kacaroglu, Business Development Specialist

Kalekalip is a world class aerospace and defence company under KALE Group, which is one of the most known business group of Turkey.

Kalekalip Defense & Aerospace division has two manufacturing premises .

#### Defence.

Kalekalip Defense & Aerospace Division manufactures high standard defence products such as:

- 122 mm MLRS
- 107 mm Rocket launcher
- 40 mm Automatic grenade launcher
- 50 Calibre sniper rifle
- 308 Calibre sniper rifle

#### Aerospace.

Kalekalip is engaged in the production of structural aircraft parts and precision parts / systems for guided missiles, rocket launchers.

Kalekalip has an impressive "on time delivery" performance with world-class aerospace customers which has been proved by "star supplier certificate" from Lockheed Martin.

Kalekalip Defense & Aerospace division is one of the strongest partner in the Turkish JSF program

#### Quality.

Kalekalip has since been performing its manufacturing activities in conformity with as EN 9100, AQAP-2120

King Abdullah II Design and Development Bureau (KADDB) was established by Royal Decree on 24th August 1999 to provide an indigenous capability for the supply of independent, high-quality, efficient and cost-effective scientific and technical services to the Jordan Armed Forces (JAF).

KADDB is the Jordanian research and development facility created to provide a one-stop solution for the supply of defence and commercial equipment optimised to the requirements of the Middle East.

KADDB's mission is to harness science and technology to fulfil Jordan's defence needs and, in the process, assist the Nation in creating a sustainable industrial base. The scope of work conducted by KADDB covers the full spectrum of research, design and development, starting with user requirement definition and threat analysis, through concept design and development, to the identification and acquisition of enabling technologies. This process is followed by prototyping, trials and evaluation, product optimisation and, finally industrialisation through the preparation of manufacturing data packs.

KONSTRUKTA-Defence. Inc. is an R&D company that has a proven capability in designing, developing and certifying state-of-the-art land and air defence weapon systems, ammunition, command and control systems, electronic systems and other customised special-purpose superstructures and platforms for both wheeled and tracked vehicles.

Some of R&D references: Self-propelled Gun Howitzers (152mm DANA, 155mm ZUZANA). Self-propelled Anti-aircraft System (BRAMS), 122mm Upgraded Rocket Launcher, 120mm Self-propelled Mortar System, Light Mortars (81mm, 98mm) and respective ammunition, Light

Turret Systems (KD-V30), Ammunition Disposal.  
The company has been involved in the defence related R&D business since 1953.

As a truly development company we provide our customers with a coherent and complete service. We identify customer requirements, provide a solution and subsequently design, develop and certify a final product.

KONSTRUKTA-Defence, Inc. has become an international player in the global marketplace disposing with deep technical understanding in various "Eastern" defence systems spread in reasonable quantities in Europe, Middle and Far East, and Africa. We are here to provide our expertise and produce highly efficient and cost effective solutions. In order to be in a position to serve both the non-NATO and NATO member customers who wish to modernise their "Eastern" systems to meet "Western" standards, KONSTRUKTA-Defence has quickly adopted and implemented NATO standards and practices.

Krauss-Maffei Wegmann (KMW), Europe's market leader in wheeled and tracked armoured vehicles, is displaying its leading high-tech competence at the IDEX 2005 with stand No. 313 in the German Pavilion, Hall 3. Based on its unique leadership in system competence KMW is developing, producing, maintaining and upgrading a comprehensive product portfolio that ranges from airmobile and mine protected vehicles such as the DINGO and MUNGO over reconnaissance, air defence and artillery systems like the FENNEK and Howitzer PzH 2000 to globally leading main battle tanks such as the Leopard 1 and 2. These broad technologies remain unmatched by any competitor, and the armed forces of 25 nations around the world underline their confidence in KMW's systems.

Just currently this unique competence has once again been expressed with a preserial development contract for the infantry fighting vehicle PUMA. The German Armed Forces intend to put a total of 410 PUMA2s into service, the world's leading system in this category. In addition

there are orders for 388 MUNGO vehicles as well as for DINGO 2's for Germany and Austria, who is the first export customer for this vehicle. The FENNEK deliveries include 406 vehicles for the Dutch and 202 for the German Army. The BOXER is currently being tested by Germany and the Netherlands as a modular 8x8 wheeled vehicle and is then scheduled to go into series production.

Further worldwide fields of activity are upgrading, modification and maintenance of armoured combat vehicles as well as the development and manufacture of testing and training equipment. In this area, training simulators for the weapon systems listed above play an important role within KMW. Moreover, the integration of state-of-the-art C\_I systems into wheeled and tracked armoured vehicles is being realised by KMW.

At IDEX 2005 in Abu Dhabi, KMW will display its range of products, including models of the DINGO 2, the MUNGO, the GEPARD, the Infantry Fighting Vehicle PUMA and the latest development the Artillery Gun Modul (AGM).

Tel. +971 2 6789500, Fax: +971 2 6789099, Email: cbs@emirates.net.ae

KUDOS is displaying their range of Folding Rapid Deployment Hard Wall Shelters, as used in Afghanistan, Iraq, Indonesia, Sudan, Kuwait and other worldwide locations, by the U.S. and U.K. military as well as United Nations World Food Program and other NGOs. Kudos

Shelters are used in the field for living accommodation, offices, kitchens, hospital clinics, communications shelters, secure dry stores and many other uses. Kudos shelters are insulated and sealed for protection against hot weather, wind and sand.

KUDOS is the affordable solution when shelter facilities are needed quickly for temporary and semi-permanent use in remote locations, military bases, etc.

Kudos units are built and dismantled in minutes - by hand - in the field, without Cranes, and no skilled labour. The unique patented system is modular and totally reusable. Kudos shelters have the highest reusability rate compared to competitors.

A full range of folding ancillary equipment such as desks, chairs, wardrobes and bunk beds is also on display as well as live 'builds' of the Kabin.

Also on show for the first time will be samples of a new and unique, lightweight ballistic material tested to stop armour piercing bullets and rocket launched grenades, this material is capable of being used for protection of buildings.

KVH Industries, Inc, is a leading international manufacturer of tactical navigation systems, fibre optic products, and mobile, high-bandwidth satellite communications systems. KVH TACNAV® systems offer every command, support, or combat vehicle 100 percent availability of position even if signals from GPS satellites are disrupted or jammed. TACNAV consolidates vehicle location and azimuth, turret angle, and far target location into a single-point interface transmittable via digital Battlefield Management Systems to the force commander and other units in the field. KVH offers multiple variants of the TACNAV system using both KVH Fibre Optic Gyros (FOGs) and digital compasses, providing complete operational support for virtually the entire spectrum of military vehicles through economical, integrated solutions. KVH DSP-4000 FOGs are critical components in turret stabilisation applications. KVH's turret stabilisation systems, suitable for multi-round, rapid-fire environments as well as large calibre, main gun applications, are fielded on vehicle variants ranging from infantry fighting vehicles to main battle tanks.

Laser Gas Ltd manufactures oxygen and nitrogen generators and controlled atmosphere systems, based on Pressure Swing Absorption (PSA) or membrane technology. Extracting oxygen or nitrogen directly from the air, Laser Gas compact on-site systems are a cost effective alternative compared to pressurised cylinder gas in many applications. Ultra-pure nitrogen gas produced with Laser Gas equipment is used for example to cool the infra-red detectors of the missiles aboard the Hornet fighters operated by the Finnish Air Force. The nitrogen generator can achieve a maximum purity of 99.999 percent, which is the highest possible.

Laser Gas Ltd is located in Finland. The company operates out of a multi-facility complex that includes administration, engineering, marketing, product support, test, training, manufacturing, inspection and warehouse departments. This allows the company to strictly adhere to high quality assurance standards. In addition, Laser Gas maintains marketing and product support offices worldwide including the USA.

Laser Shot Inc manufactures Military and Law Enforcement Shooting Simulation systems for clients worldwide. The systems were designed with direct input from current and former Law Enforcement and Military professionals. For many years Government organisations have been looking for this type of cutting edge technology at a realistic price. It is now available in the form of the LE-Pro and MSET range. A Laser Shot Shooting Simulator offers you the following.

- Drop-in recoil driven by a variety of air sources allows use of organic assigned weapons at a very low cost.
- End user capability to add geo-specific and mission oriented training content rapidly.
- Leverage the training value of the Americas Army software as a training tool.
- Take advantage of commercial off the shelf components for ease of immediate replacement and upgrades to your system.
- Brief and execute the training all on one system. Also serves as a large 10' x 8' monitor when connected to a satellite or cable feed. DVD as well as full Microsoft Office capability.
- Turn any 10' x 14' space into a training area.

Come and visit the stand for a personal demonstration or contact us on the above details.

LITEF is a leading manufacturer of airborne, land and naval navigation products.

More than 30 of the world's navies and coast guards use LITEF naval navigation equipment. LITEF's products include the world's first Fibre Optic Gyro (FOG) Gyro Compass and a new family of Ring Laser Gyro (RLG) Inertial Navigation Systems.

Inertial systems for aircraft, helicopters, missiles, drones and armoured vehicles range from Attitude Heading

Reference Systems (AHRS), Inertial Measurement Units to Single Axis Rate Sensors and Accelerometers.

The LITEF Land Navigators (LLN) family offers a wide variety of cost effective configurations including a new driver display unit and provides the most advanced solution for any kind of land navigation requirements. All units are qualified and in production. More than 1,500 systems have already been delivered and installed in various types of vehicles like Leopard 2, Air Defence ROLAND, NBC FUCHS, FENNEK Recce Vehicle, as well as Leclerc ARV, BMP-3, HMMWV of the U.A.E. Land Forces.

LÜRSEN, in Bremen/Germany, is internationally known for the design and construction of high quality ships in the field of high sophisticated navy vessels, Mega Yachts and

special purpose ships. LÜRSSEN was founded in 1875 and has a long experience in the design and construction of naval vessels. Many Navies have been supplied with LÜRSSEN vessels from Fast Attack Crafts, Corvettes, Frigates, Mine Hunters up to Combat Support Vessels. LÜRSSEN is continuously expanding its building range and facilities, recently with the acquisition of a floating dock more than 220 m length next to the yard's facilities. In this facility LÜRSSEN can carry out refits of Frigates and support vessels. Besides the construction work in new buildings, LÜRSSEN also executes local in-country refits of several navies' ships emphasising the full support LÜRSSEN is able to supply to its customers.

Portrait of the MAN Nutzfahrzeuge Group

Based in Munich, Germany, the MAN Nutzfahrzeuge Group is one of the leading international manufacturers of trucks and buses. In the fiscal year 2003 the company, with a workforce of 34 000, sales of almost 62 000 trucks and buses recorded a turnover of € 6.7 billion.

MAN commenced production of commercial vehicles for civilian and military deployment in 1915. The building of all wheel drive military vehicles for off-road operation started early on experience from the civilian vehicles benefiting the military vehicles – and vice versa. The effects of large-scale production of all the major components that go into a commercial vehicle are long service life (high durability), a cost-benefit ratio which is right for the market and advantageous spare part logistics. A dense service and workshop network in many countries ensures short vehicle downtimes and rapid spare parts back-up. Trucks – chassis for fixed and interchangeable bodies of all types, semi-trailer tractor and tippers with outputs of between 75 and 463 kW (102 to 630 hp) and 7.5 to 48 tons permissible gross vehicle weight. Specially designed high-mobility off – road trucks. Engines – diesel engines for industrial and automotive uses with ratings up to 935 kW (1300 hp). Diesel engines for marine power systems with ratings up to 882 kW (1200 hp). Gas engines with ratings up to 205 kW (280 hp). Components – axles, transfer cases, cabs, pressed parts, tools, cast parts.

Mediaware is the leading global developer of digital video systems and solutions for the ISR and Defence sectors. Mediaware's systems are deployed widely by US defence groups, and have been used extensively by the US Air Force and other intelligence organisations in real world deployments. Our systems enable the:

- Acquisition of digital imagery and metadata;
- Frame accurate multiplexing of metadata into digital streams;
- Analysis, exploitation, annotation and manipulation of live streaming video;
- Frame accurate navigation. Searching and editing of compressed video files;
- Intelligent logging and storage of digital files to video database for advanced searching.

Billions of dollars are being spent on platforms which capture video imagery. This data is only as good as the exploitation and storage systems used to process the imagery. Mediaware is the global leader in this field and can provide you with a solution that fits your specific needs.

Meggitt Defense Systems (MDS), a unit of Meggitt, is a world leader in free-flying aerial, marine, and ground-based targetry, towed and glide targets and countermeasures, unmanned vehicles, pods and aeromechanical structures, scoring systems, ammunition handling equipment and environmental control systems.

MDS's Voodoo is a next-generation aerial target that is more affordable than jet-powered targets and follows the path cut by Banshee, the leading-edge aerial target that has been in service in more than 40 countries. MDS recently acquired Schreiner Canada and now has a leading position in unmanned surface craft to add to its innovative systems for unmanned vehicles and ground targetry range systems and services. In addition, MDS is an innovator in ammunition handling, producing ordnance systems for Apache helicopters, the Stryker Mobile Gun System, and the AC-130 gunship. MDS also offers Environmental Control Systems used in thermal management for battle tanks, pods, and electronics.

MILIPOL is the worldwide leader in exhibitions for State and public security, law enforcement, Police equipment and industrial site security.

Milipol Qatar 2006 is being organised by Qatar's Interior Ministry from 8th to 10th May 2006 at the Qatar International Exhibition Centre in Doha.

During the last Milipol Qatar in 2004: 220 worldwide exhibitors met 3,900 professional and authorities from 58 countries.

Qatar is experiencing breathtaking growth and

development projects are multiplying, especially to organise the Asiatic Games in December 2006.

In order to keep pace with such growth, Qatar's Interior Ministry has decided to modernise, equip, and invest in equipment for all the country's internal security departments as well as public and industrial security.

The State of Qatar is therefore inviting senior officials from the Ministries of the Interior, of Defence, decision makers and professional purchasers in public and industrial security throughout the region.

This year in France the 14th edition of Milipol Paris will take place from 22nd to 25th of November 2005 at Paris-Le-Bourget exhibition centre.

We sell products that don't come back to customers that do.

Milkor Marketing specialises in the worldwide marketing of 40mm Grenade Launchers and crowd-control equipment which are designed and manufactured in South Africa.

Milkor Marketing's philosophy of "Sales through Service" goes hand in hand with our commitment to after sales product support.

The highlight of the Milkor Marketing exhibition will once again be the 40 mm Multiple Grenade Launcher "MGL Mk-1 SERIES" which is today operational in 35 countries, including several NATO nations.

The Mk-1 Series of launchers are fully designed, developed and qualified according to NATO standards. Our manufacturing facility is accredited with ISO9001:2000. A successful history of 25 years in the design, development, industrialisation and manufacturing of 40mm Low Velocity MGL's is therefore backed by the most modern and stringent standards available today.

The Bridge Between Technology and Experience

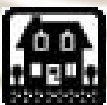

MKE, with its experience rooting to the 15-century, is the leading company in Turkish Defence Industry keeping the modern and high technology in priority.

MKE derives its strength from dedication to technology, unconditional customer satisfaction and zero - error production performance at world class high technology plants in order to have a strategic position in the Global Market.

MKE, having a large range of products, not only serves the Turkish Armed Forces but also takes share in the International Defence Industry Market by exporting to more than 40 countries.

MKE with its 12 modern factories and 7000 experienced personnel, keeps its range of production in 4 main groups as follows.

- \* Ammunition Group
- \* Rocket Group

- \* Weapon Group
- \* Explosives / Powders and Pyrotechnic Products

MKE is proud to be awarded with the latest AQAP and ISO certificates for both Head office and factories.

Being the dynamic meeting point of experience, knowledge and technology, MKE gained its own leading position in Turkish Defence Industry and will continue stepping forward in the Global Market.

Mobile Medical International Corporation's mission is to bring tomorrow's healthcare technology to the world today by providing the highest quality, most technologically advanced readily deployable mobile shelter solutions. MMIC has designed an advanced NBC protected field shelter system, the 21st Century Mobile Shelter System (21CMHS),

which is a multi-functional system solution designed to meet stringent medical requirements yet is also readily reconfigurable for medical and non-medical applications such as command/control, lab/pharmacy, surgery, ICU, communications, lavatory/shower or general living quarters. Configured in specially designed ISO shelters, the totally integrated systems are equipped with self-levelling and include: self-erecting soft-wall shelters, power (generator & advanced emergency), ECU (HEPA & NBC filtration), and LED Lighting Surgical shelters also include integrated medical gas and vacuum systems. Each two-shelter system provides a two-bed surgical suite and two soft-wall patient wards accommodating up to 20 patients.

NEW SEASON INDUSTRIAL CORP. established since 1970, manufactures high quality N.I.J. approved Handcuffs, Baton, Rifle Magazines, Pistol Magazines, Military & Police Equipments.

# SHOWGUIDE

New Season supply the following products to Military and Police in 97 countries.

**Products:**

Handcuffs N.I.J. Approved, Baton, Pistol Magazines, Rifle Magazines, M16 Magazine, M14 Parts, Gun Parts, Tripod, Tank Parts, Artillery Equipments, Pistol Holsters, Handgun Pouches, Cuffs Case, Duty Belts, Pistol Speedloaders, Slappers, Nightsticks, Seat Belt Cutter, Torches, Camouflage Face Paints, Metal Detector, Military Equipments, Police Equipments.

**New Patents Products in 2005:**

Swivel-N-Fix Holster,  
Speed Cartridge Loader,  
Molded Speed Loader Pouch

\* New Season is the OEM factory of many World Famous factories of Gun, Handcuffs and Magazines.

\* New Season Handcuffs passed all strict tests - N.I.J. Standard 0307.01.

New Season Handcuffs is certified and approved by U.S. National Institute of Justice.

Newcon Optik is one of the world's largest manufacturers of electro-optics outside USA. Our two main factories have been operating since 1952. We export up to 90

percent of our products to 33 countries.

Current line of our products includes:

- Night Vision Systems and designated Components;
- Laser Range Finders and speed detectors;
- Stabilised Image Binoculars;
- Laser Aimers and Illuminators;
- Other specialty optics.

Our goods are accepted by defence and security forces of US, Canada, Great Britain, UN peace-keeping missions and other military and law enforcement worldwide.

Newcon Optik is frequent exhibitor at the world's major Shot Shows, annual Military Night Vision Conferences in Washington and London, Latin America Defentech (Brazil), Eurosatory Show (France), DSEi, MILIPOL, etc.

Newcon Optik is a member of Canadian Defence Industries Association and also enjoys CCR and NCAGE registration as a supplier for military programs through the world.

NICO-PYROTECHNIK and the branches Pyrotechnik Silberhütte, Buck Neuenburg and Buck Fronau represent the protection systems / pyrotechnics business unit of Rheinmetall Waffe Munition.

With the rapid advances being made in information technology, the threat posed by intelligent weapon systems is also rising. The protection systems / pyrotechnics unit has specialised for years in developing and introducing protection systems designed to combat sensor-guided weapon systems, offering means and systems for protecting people, vehicles and military assets. In addition, large-calibre dedicated munition, training and exercise systems, and 40mm ammunition, as well as civilian and military pyrotechnic products form part of the portfolio. Apart from automotive products, the latter comprise illuminating and signal flares of all calibres, coloured smoke and screening smoke grenades, and

precision special-effect munition as well as non-lethal sound & flash stun grenades.

 Contact: Mr Rene Graber

Nitrochemie represents the propellants business unit of Rheinmetall Waffe Munition. Their core skill comprise the development and manufacture of chemical products for defence technology and civilian needs. Along with artillery charge systems and propellant powder for large-, medium- and small-calibre applications, combustible molded parts such as cartridge cases are manufactured. Combustible cartridge cases form an indispensable part of modern high-performance propellants for tank ammunition. In artillery, they are the prerequisite for modular propelling charge systems, which decisively enhance the logistics, cast efficiency and effectiveness of such weapon systems as the 2000 self-propelled howitzer. As ammunition components they help reduce barrel erosion while lowering the ammunition's sensitivity to external influences. Combustible components are supplied according to the unit's own and customer specifications. As an advanced ammunition component in this segment, the new modular propelling charge system MTLS has been developed for tank and field howitzers with a long range and rapid firing capability.

Noptel manufactures innovative and easy to use shooter training systems for defence forces, police and security. The company has supplied more than 6000 Shooter training systems to over 50 countries since 1982. MilTrainer Series products are meant for marksmanship training and use PC for the skill analysis. Field Training Series products are simple and robust battery operated devices for training with pop-up targets.

Training system customers can be found in all parts of the world. Some of the major users are defence forces in Finland, USA, South Korea, South Africa, UAE and Pakistan and police forces in Finland, Germany, Sweden, Iran and India

For military training Noptel presents three products: ST-2000 MilTrainer, a marksmanship trainer for rifles, ST-2000 PistolTrainer, a marksmanship trainer for service pistols and ST-2000 Combinator, a versatile rifle training device for marksmanship training and field training with pop-up targets. The weapons can be equipped with an advanced pneumatic recoil system.

Nordic Aero is the inventor and manufacturer of the aircraft cleaning equipment Nordic Dino II and Nordic Dino 777, which today is in operation in 70 samples all over the world. This unique purpose built equipment, is servicing both civil as well as military aircraft. Advantages by using the Nordic Dino:

- Minimises the aircraft's ground time
- Less detergent used (environment)
- Less rinse water used
- The quality of cleaning is great
- Manpower saving
- Security (less persons around the aircraft)

- Frequent and efficient cleaning means less corrosion and surface problems.
- Health of Staff will be improved compared to clean the aircraft manually.

Furthermore, Nordic Aero also provides the civil and military industry in Europe, with Passenger Ramp Handling, De/anti-icing, Cabin Cleaning, Exterior Cleaning. The company employees 800 staff and has a turnover of 50 mio USD.

Development

Since 1976, Nurol Makina with its technology and capabilities and infrastructure performs design and manufacturing of defence products. The projects are prepared by experienced technical staff of design and development department and manufactured by utilising advanced technological manufacturing techniques.

Computer numerically controlled 4 and 5 axis machining centers and horizontal/vertical lathes are used for machining activities. Laser cutting is available for ballistic armouring related production. Plasma and oxygen cutting technologies are available for cutting steel plates. Special benches for cutting aluminium alloy plates, mechanical controlled presses, paint shop drying ovens, assembly line for metal forming are in use.

With a view to meeting the needs of the Turkish Armed Forces for AWVs, which are likely to increase in near future, Nurol Makina, a member of Nurol Group, has decided to establish a strategic partnership with Steyr-Daimler-Puch Spezialfahrzeuge AG&Co. KG (SSF) for the further development, production and marketing of PANDUR II 6x6 and 8x8 vehicle family in line with national and international needs. In this framework, the License Agreement which provides for the production of these vehicles in Nurol Makina facilities under license for the needs of Turkey and other countries, was undersigned by the parties in Ankara on June 11th, 2003. Nurol Makina performs the manufacturing Armoured Combat Wheeled Vehicles and the manufacturing of add-on armouring for Armoured Combat Vehicles, manufacturing of Turret Systems, NBC filter systems, Special Purpose Vehicles including Riot Control Vehicles, Military and Civil Shelters.

Nurol Makina holds ISO 9001:2000 and AQAP-2110 NATO Quality Management Systems Certificates.

Contact: Mr Andreas Schneider

Oerlikon Contraves Pyrotec and the Branch Mauser Oberndorf represent the medium calibre business unit of Rheinmetall Waffe Munition.

The medium-calibre unit offers automatic cannons, weapon systems and ammunition which cover the full range of present and future threat scenarios and can be deployed from land, sea or air. The main product groups encompass vehicle-mounted armaments, aircraft cannon

systems and naval guns, including their ammunition as well as ammunition for air defence systems.

Decades of experience in the design, development and production of automatic cannons have resulted in a number of modern and precise weapon systems featuring easy handling, cost efficiency and operational reliability.

In this respect, the German navy has looked to the future in its procurement planning by opting to deploy the MLG 27 light naval gun system, which is designed to protect warships and smaller vessels at close range. Aircrafts, helicopters, fast patrol boats and coastal objects can be engaged with a high hit probability and effectiveness.

Orizzonte Sistemi Navali S.p.A. is the Italian warship engineering Company, jointly owned by Fincantieri and Finmeccanica, committed to design and supply turnkey high-tech military platforms.

The Company unites the advanced technological and industrial capabilities of its shareholders to undertake the commitment of satisfying the global operational needs of the Customer, with the highest level of flexibility Orizzonte Sistemi Navali takes. Full responsibility towards the Customer being Prime Contractor and Design Authority for warship integrated solutions.

As Prime Contractor, OSN provides enhanced value to the Customer Navy by acting as a single point of responsibility for the complex organisation needed for the design, development, production and through-life support of a naval vessel. OSN acts as "Whole Warship Design Authority", being responsible for the definition of the platform system and the combat system, as well as the physical and functional integration of the whole ship and

carries on the management of the programmes throughout the whole lifetime of the ship.

Since 1943, Oshkosh Truck Corporation has built and fielded over 30,000 military vehicles providing unflinching on-the-move support to the United States military and allied forces worldwide. Oshkosh's heavy and medium defence trucks have served in missions in the Persian Gulf, Bosnia and Middle East with unqualified success. Wherever our trucks go, our in-field service technicians accompany and provide parts, training and logistics support worldwide.

We have developed a state-of-the-art, online parts ordering system that is available to all of our defence customers- our exhibits for IDEX 2005 include the UK Heavy Equipment Transporter (HET) Tractor, US Marine Corps Medium Tactical Vehicle Replacement (MTVR) Recovery Vehicle, US Army HET with a fully desert tested Tank Transporter Trailer (635NL) co-produced in Egypt.

Please stop by the Al Masood stand to see these magnificent vehicles.

Contact: Marina Magnani

Oto Melara belongs to the Finmeccanica group and it is the result of the merging with Breda Meccanica Bresciana that took place in 1994. The Company operates at the two plants, located in La Spezia and Brescia, and it is, presently, world leader in the design and production of small and medium calibre naval guns and national leader in the production of weapon systems for the Italian Army with research and development capabilities ranging from naval guns to ammunition, from artillery guns and armoured vehicles to anti-aircraft systems. The merging of the two companies contributed significantly to increase the respective systems capabilities that, together with the most modern technological expertise, allow Oto Melara to offer to customers a global solution.

The staff of the two plants can satisfy the Armed Forces' requirements for modern operational systems and, at the same time, guarantee the certainty of a continuous assistance and support service throughout the operational life of the products.

The complex comprises of fourteen ISO-9001-2000 and ISO-14001 certified factories.

- Weapons Factory
- Filling Factory
- Machine Gun Factory
- Propellant Factory
- Small Arms Ammo Factory
- Tungsten Alloy Factory
- Medium Artillery Ammo Factory
- Tungsten Carbide Factory
- Heavy Artillery Ammo Factory
- Steel Foundry
- Tank & Anti Tank Ammo Factory
- Brass Mills
- Explosives Factory
- Garments Factory

These factories employ some of the latest state of the art technologies, including computerised numerical controlled machines and flexible manufacturing systems for production or precision components.

- INFANTRY WEAPONS
- SMALL ARMS AMMUNITION
- ARTILLERY AMMUNITION
- MORTAR BOMBS
- AIRCRAFT & ANTI AIRCRAFT MUNITIONS
- AIRCRAFT BOMBS
- ROCKETS
- GRENADES
- MILITARY EXPLOSIVES & PROPELLANTS
- COMMERCIAL EXPLOSIVES
- COMMERCIAL PRODUCTS.

Achievement of the ISO-9001 & ISO 14001 certification for quality has earned POF an international recognition. Quality begins right from the inspection of raw materials for which metallurgical and chemical laboratories are spread throughout the complex while live firing test facilities are available with the most modern ballistic monitoring units and conditioning chambers in several firing ranges to ensure that our products conform to established international acceptance standards.

Contact: Mrs. Marie-Anne Stalla

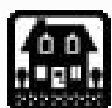

PANHARD has been one of the main manufacturers of light armoured wheeled vehicles in the world for nearly a century.

PANHARD has sold nearly 8000 armoured vehicles in 47 countries over the world since 1960 , developing a complete range of vehicles from 4 to 12 tons.

This range of particularly compact, agile and evolutive vehicles is optimised for close combat on open ground as well as in urban areas. It can carry out missions of safety, of main force support in extreme conditions of ground and climate.

The symbol of this success is the four tons V.B.L. 4x4 which has been used for more than 15 years in 16 countries. 2200 vehicles have been ordered, 1600 of them for the French Army.

A PANHARD VBL anti-tank KORNET version is on display at IDEX 2005.

World leader in hearing protection and communication system.

The Peltor product range is founded on over 50 years of research and experience. This strength has brought Peltor to its current position as world-leader in hearing protection and communication in noisy environments. The

wide range of products covers everything from passive hearing protection to active noise reduction and headsets with built-in communication system.

We all know that a soldier's senses must be sharp to enable him to operate successfully. Hearing is as critical as vision, both in darkness and daylight. He must be able to hear incoming radio signals without the risk of revealing his location. He needs to be able hear and locate a snapping twig or a whispered message, and be able to communicate unhindered over the radio, even in deafening combat situations.

For all noisy situations it's always a Peltor solution.

Peltor is a part of Aearo Inc in Indianapolis USA.

pgam has been established in the business of vehicle engineering and speciality vehicle build for nearly 30 years. Today pgam's experience in the production of ballistic and blast protection systems is unrivalled in the industry and our projects include all vehicle categories from cars to tracked tanks and also personnel protective systems. Pgam utilises all material options from ballistic grade steel to ceramic by using first design principles to provide the most suitable solution based upon threat, cost and weight. Pgam has manufactured ballistic and blast protection systems for over 1000 vehicles covering all recognised threat levels for world wide vehicle manufactures. Our own VR6 level vehicle, based on the Toyota Land Cruiser, is certified in respect to its ballistic and blast protective performance. The pgam display at IDEX 2005 features the VR6 Toyota Land Cruiser, ballistic and blast test video, ballistic materials and personnel protection systems.

Created in 1961, PRONAL manufactures its first products : Flexible tanks intended to European Army.

From now, the company has developed an important know-how in the design and manufacture of inflatable products made of elastomer or plastomer coated fabrics.

PRONAL employs unique manufacturing techniques in fabricating its products, including high-temperature vacuum vulcanisation.

It permits to obtain products totally homogeneous, with important mechanical resistance and a well-kept from atmospheric and chemical aggressions.

#### Main Products :

- . Flexible tanks for transport (water, hydrocarbons)
  - on vehicles (130 to 3 300 USG)
  - under helicopters (130, 270, 405 and 540 USG)
  - towable (55, 270 and 540 USG)
- . Flexible tanks for storage (water, hydrocarbons) from 5 to 81 000 USG
- . Complete system of supply logistics : tank with all accessories (Moto-pump group, water filtration, guns, meters, pipes...)
- . Lifting bags for any charge to 100 tons

Q-MAC Electronics leads the field in the design and manufacture of tactical HF and VHF transceivers. The flagship product, the HF-90M Frequency Hopper, is the world's smallest high performance military HF SSB transceiver.

Q-MAC has been awarded many engineering and export awards for its product range. All Q-MAC products are backed by commitment to long term after sales service, support and certified quality standards.

The company was started in 1994 and has maintained

sustained growth to now have established direct sales channels with end users in over 85 countries. Most importantly, the company enjoys a strong financial position, with consistent growth in annual sales and a generous re-investment policy in the areas of R&D and market development.

Q-MAC's management team operates from a purpose built manufacturing factory and office facility located in Perth, Western Australia. Q-MAC distributes and services its products via a large international network of dealers and agents.

Quittner & Schimek is a company specialised in interconnections solutions for Military, Aerospace, Telecommunication and Transport applications. The company provides assembly of Wire Harnesses, Electrical Boxes, Panels, Cables and similar units as per customers requests and specifications. In prototyping, design, components procurement, production and testing under specific conditions, there are various possible arrangements in order to fully meet multiple customer support demands. The production uses state-of-art manufacturing and testing equipment. The company is a QPL certified assembler of circular connectors under MIL-DTL-38999 (LJT, TV, SJT, JT) and 62/162GB (MIL-C-26482) including protection caps and EMI backshells. The assembly line provides customers with short delivery time of critical components. The company also deals in assembling fibre optic connectors and equipment. The company is a recognised approved distributor of all interconnections components such as connectors, backshells, tools, wires, heat shrinkable parts, relays and many more with most parts on stock ready for use or shipping.

Quittner & Schimek holds different customers approvals and certifications ISO9001:2000, QPL, QSF-A, and soon also PART-21.

From man-pack antennas to major HF installations. From short, medium and long-distance HF and broadband coverage to shore-ship/ship-shore/ ground-air communications, the RFS product range includes tactical man-pack, transportable and stationary antennas for all

omni-directional and directional applications and field conditions.

As part of the global RFS group of companies, RFS Australia is represented by the RFS offices in 24 countries around the world.

### Custom HF System Design Services

For 30 years RFS engineering has provided government and military bodies with consulting and design services along with complete HF turnkey project services. As an example of RFS' major projects capability the 'Over the Horizon' radar network (JORN) is an HF skywave radar system providing surveillance over an area of approximately 20 million square kilometres (8 million square miles).

### AVIATION AND RADIO-ELECTRONICS CAPITAL GROUP - POLAND

RADMOR is state owned company from Poland and was established in 1947 – what means 57 years of experience. We are the leader in radio communication branch. Our best export product is military handheld radio station RADMOR 3501. We have ISO 9001 and AQAP-110 certificates. RADMOR makes the deliveries to Armies of Poland, Czech Republic, Slovakia, Lithuania, Latvia, and North African countries as well as to civilian customers. We employ well educated and qualified personnel. RADMOR offers handheld, vehicular, stationary radio stations and radiotelephones for military and civilian customers. Our main markets are Land Forces, Police, Fire Brigades, Health Services, Taxi, etc.

#### The company offers:

VHF/FM tactical radio stations  
 Digital radio links  
 Radio communication systems – trunking (including TETRA) and dispatcher systems

Professional radiotelephones – handheld, mobile, stationary  
 Radio modems and data transmission modules  
 Antennas

Redflex is a global supplier and experienced designer, manufacturer, integrator and maintainer of innovative and cost effective touch screen operated voice and data communication systems for the Defence, Aerospace, Transport and Utilities markets. With in house hardware and software design, development and manufacturing capability Redflex is readily able to tailor communication solutions to meet customer's unique requirements.

Redflex manufactures Switchplus®, a non-blocking, fault tolerant, hot swappable and highly reliable digital voice and data switch, which is used in mission critical applications such as:

- Mobile/fixed secure/non-secure communications
- Naval shipboard communications
- Remote radio control
- Inter-site data routing
- Secure conferencing
- Emergency service communications, alarm monitoring and response coordination
- Communications simulation

Switchplus® has a multi-lingual operator interface, is fully

scaleable, is vendor infrastructure and communications equipment independent, and utilises packet based switching technology and VIP communications. All this makes Switchplus® a truly future proofed product and maximises customer return on investment.

RENK is the worldwide leading manufacturer of a wide range of transmissions of latest technology, proved to the highest technical standards of innovation for tracked military vehicles.

These transmissions are offered for 19 different types of tracked vehicles for the power range between 150 to 1300 kW, for new vehicles and retrofit programmes and are suitable both for diesel engines and gas turbine drives. They are applied as so-called T, L or U configurations for front or rear installation.

Power shift and steering transmissions as well as the brake system are integrated in the gear unit casing.

Further products for the military sector:

- Gear units for navy vessels like frigates, corvettes, patrol boats, mine hunters and others

- Marine stern tube bearings and thrust blocks for military vessels, also shock resistant
- Test systems for track-laying vehicles and helicopter transmissions

### Rheinmetall Defence Electronics GmbH

Brueggeweg 54, D-28309

Bremen, Germany

Tel: +49 421 457 01

Fax: +49 421 457 2900

E-mail: [marketing@rheinmetall-de.com](mailto:marketing@rheinmetall-de.com)

Website: [www.rheinmetall-de.com](http://www.rheinmetall-de.com)

A leading electronics and systems engineering company

Rheinmetall Defence Electronics GmbH (short: RDE) with its divisions Land Systems, Airborne Systems and Simulations is one of the leading German companies in the field of electronics and systems engineering.

The Bremen based company is a member of Rheinmetall DeTec AG, the management holding for all defence activities within the Rheinmetall group.

Subsidiaries and associated companies at home and abroad warrant the necessary vicinity to customers all over the globe.

Technological activities and products at RDE range from optics/optronics and sensor equipment over multi-sensor platforms for ship, airborne and land applications, fire control systems, command and control, reconnaissance systems up to missile based launch systems for ground and air defence. Furthermore the product range covers all types of simulators from simple training aids over full-scope replica simulators with digital visual systems (virtual reality) for land, sea and airborne applications as well as for joint/combined forces tactics up to complete management systems.

The company also develops and produces unmanned aerial vehicles (UAVs) including the full scope of ground infrastructure. Furthermore RDE acts as prime contractor for systems management, system integration and logistics.

Besides its own certification in accordance with the relevant DIN/ISO criteria, the company has its own test facilities, for instance to qualify optical and optronic subsystems, to fulfil the highest standard of military technology.

Rheinmetall Landsysteme GmbH - A Company of Rheinmetall Detec AG

Rheinmetall Landsysteme GmbH (RLS) with its headquarter in Kiel (Germany) represents within the Rheinmetall DeTec-group the business unit "Land Systems". Being one of the leading systems companies for the development and production of wheeled and tracked armoured vehicles, RLS up to now has delivered

more than 14,000 armoured vehicles and subsystems to customers in 36 countries. RLS offers a broad spectrum of products in the fields of:

- \* Light Armoured Vehicles
- \* Medium-Weight Armoured Vehicles
- \* Infantry Fighting Vehicles
- \* Turret Systems and Weapon Stations
- \* Main Battle Tanks

**\* Armoured Support Vehicles I :**

- \* Self Propelled Howitzers
- \* NBC Systems Technology
- \* Command and Control Systems
- \* Gas Turbine Applications

The companies comprising the Weapon and Ammunition division offer a diverse range of products in the following business units: large-calibre, medium-calibre, propellants, and protection systems/pyrotechnics.

**Large Calibre.**

The large-calibre unit holds a foremost position worldwide in the development and production of large-calibre weapon systems and ammunition for battle tanks and artillery systems. The L55 120 mm smooth-bore weapon system, for example, makes a decisive contribution to the Leopard 2 battle tank's effectiveness.

**Medium Calibre.**

Please find more information at Oerlikon Contraves Pyrotec in this catalogue.

**Propellants.**

Please find more information at NITROCHEMIE in this catalogue.

**Protection & Pyrotechnic.**

The protection systems/pyrotechnics unit's product

spectrum encompasses protection systems for land, air and naval forces as well as pyrotechnics. The MASS naval countermeasure system e.g. offers unique protection against intelligent precision weapons. The computerised decoy system protects ships against attacks from modern, sensor-guided missiles.

Please find more information at NICO-PYROTECHNIK in this catalogue.

ROKETSAN was established in 1988 to help the accomplishment of modern rocket and missile technology in Turkey and to serve the Turkish Armed Forces with modern defence products.

Below are the products which are designed, developed and manufactured by ROKETSAN:

- T-122 (122 mm Multi Barrel Rocket Launcher)
- TR-122 (122 mm Extended Range -40+ km range- Multi Barrel Rocket Launcher Ammunition Family with High Explosive, Steel Ball and Submunition Cargo warheads within composite sealed pods)
- SR-122 (122 mm Multi Barrel Rocket Launcher Ammunition Family with High Explosive and Steel Ball warheads within composite sealed pods)
- T-107 (107 mm towed / self propelled Multi Barrel Rocket Launcher)
- TR-107 (107 mm Extended Range -11+ km range- Multi Barrel Rocket Launcher Ammunition Family with High Explosive and Steel Ball warheads)
- 40 mm Grenade Launcher
- 9 mm Pistol

Besides fulfilling the requirements of Turkish Armed

Forces, ROKETSAN is also active in the international market such as a running contract with United Arab Emirates Armed Forces. Company has also studies in international research and development programs, panels in NATO, WEAG, AGARD, NT AG and participates a number of technology development, pre-feasibility and feasibility studies.

ROKETSAN complies with DoD 4145.26-M in safety and AQAP-110 in quality and currently has around 700 employee in its modern facilities.

Rolls-Royce – the driving force in marine solutions.

With 70 of the world's maritime forces and over 20,000 commercial vessels using Rolls-Royce equipment, Rolls-Royce is a truly global marine business.

Customers can select from the widest range of marine products from a single supplier. In addition to Rolls-Royce marine gas turbines and nuclear plant it includes Bergen diesels, Kamewa and Bird-Johnson propellers, Kamewa waterjets, Interling / Brown Brothers / Frydenbö / Tenfjord stabiliser and steering gear systems, Michell propeller shaft bearings and marine electrical power, distribution and automation systems. A full range of underway replenishment at sea systems and deck machinery completes the range.

In ship design the UT-series of workboats are now being tailored to provide multi-purpose vessels for Exclusive Economic Zone management duties.

Our extensive product base and experience in both ship and propulsion systems design, enables Rolls-Royce to bring the right products together to provide the optimum system solution. Support packages that go well beyond reactive spares provision or one-off overhauls are tailored to individual requirements.

**Royal Schelde**

Royal Schelde, founded in 1875, is the sole supplier to the Royal Netherlands Navy of naval surface vessels. Over the past half-century seven consecutive frigate programs were successfully executed. Current orders include the construction of four Air Defence and Command-frigates (LCF), and a second Landing Platform Dock for the Royal Netherlands Navy, as well as various orders for other military and non-military customers. These include contracts for the Midlife Modernisation of the Hellenic Navy S-Frigates (engineering and hardware), the design and engineering of the British Royal Navy's Bay Class LPD's and the design and construction of two corvettes for the Indonesian Navy. 2004 deliveries include two Hydrographic survey vessels for the Royal Netherlands Navy, an Offshore Patrol Vessel for South Africa and a Buoy Laying Vessel for MENAS in Bahrain.

Royal Schelde will present its Sigma range of offshore patrol vessels and corvettes during IDEX 2005.

**Damen Shipyards Gorinchem**

Damen Shipyards Gorinchem is one of the operating companies in the group; it is responsible for the sales and marketing activities in the Middle East, where over 600 vessels have been delivered to date. The shipyard itself is based in Gorinchem (Holland) and focuses on design and construction of commercial and small military vessels, ranging from tugs, workboats, dredgers, buoy laying and offshore vessels, to fast ferries, patrol boats and crew boats, all based on modular building principles and readily available hulls or complete vessels.

- Damen Technical Cooperation (DTC) provides complete shipbuilding kits (design, materials and technical assistance), enabling construction of Damen-vessels under license at local shipyards worldwide.

- Damen Equipment Project and System Engineering (EPSE) offers repairs, conversions and rebuilding projects and provides marine equipment and installation services.
- Damen Parts provides highly competitive spare parts supply services, for fast delivery of all marine parts and components, for both Damen-built and other vessels.
- Damen Trading & Chartering operates a small fleet of Damen-built workboats for charter, and acts as a trading / brokerage company for the sale of second-hand and traded-in vessels.

Rutter Technologies Inc. is a publicly traded and market driven technology company specialising in video processing as well as synchronised recording and playback of audio and video sources for the aviation and marine industries. Rutter's sigma S6 radar processor is a combination of PC-based hardware and software that augments conventional radar to provide enhanced detection of small objects by using full resolution video

display and processing. The sigma S6 provides a powerful and cost effective method for capturing, processing and distributing radar video for many types of applications. Rutter's High Resolution Video and Audio Recorders are used for synchronised recording and playback of video, audio and data streams for use in ATC and VTS centres. This video and audio recorder and playback system is flexible and scalable and uses the latest COTS components to provide a cost effective and efficient means of record and playback of all relevant audio and video sources.

The Scandinavian Demining Group is the developer and producer of the SCANJACK Mechanical Mine Clearing

System. The SCANJACK system was after intensive tests of different Mine Clearing Systems chosen by the Swedish Army to be included in its international Engineering Battalion. The SCANJACK is equipped with double rotating flails that gives outstanding clearing efficiency and safety for the driver, "Do it Twice and do it Properly". The System is built on a 8X8 wheeled/tracked terrain chassis for extraordinary tactical mobility and has been in use in The Balkans since year 1999 and has proven to be one of the most reliable and cost efficient mineclearing systems on the market. An average of 10000 sqm per day is the area-clearance capability when performing Demining operations.

SHS-ME (SCHAUFF Helicopter Services Middle East).  
 Advanced products for the aircraft industry:

1. FLYMAP moving map GPS Systems incl. off-line mission planning Usable for aircraft, maritime and ground troop usage. Any map you supply, we can integrate with an advanced layer technology down to street-level for EMS-Helicopter support.
  2. AVEXUS Lifecycle management for complex assets. Inventory, resources, cost & financing planning and visualisation software for the ultimate control. Most advanced MRO software (f.e. wireless worksheets etc.).
  3. Electro-hydraulic ground handling systems for Schweitzer, Hughes/MDHI 500/520N and 600 series as for Bell Helicopters.
  4. NOMEX flightgloves, hoods and flightsuits for aircrews, police and special-ops forces
  5. BRUNOX anti-corrosion additives confirming several classifications: MIL-C-81309 C, MIL -C-16173 D, Norwegian maritime Directorate A-30869/84, NSN 6850 / 8030-25/30, USDA, VV-P-216B, O-W-1284B etc.
  6. FRONIUS advanced aluminium and stainless steel Welding Technology including the new CMT welding technology for steel/aluminium joints!

The Schiebel group focuses on the development, testing and production of the CAMCOPTER® Unmanned Aerial Vehicle System, as well as state-of-the-art mine detection equipment and, Schiebel has built an international reputation for producing quality products backed by exceptional after-sales service and support.

The CAMCOPTER® family of UAV Systems are fully autonomous helicopter platforms, specifically developed to carry a wide variety of payloads. The next-generation CAMCOPTER® S-100 Tactical UAV System is now available, providing advanced performance and features matched to the needs of the tactical commander.

AN-19/2 (AN/PSS-12) was selected as standard mine detector for the US Army, and was adopted as the standard for numerous military and humanitarian organisations.

MIMID™ Miniature Mine Detector is a compact, lightweight mine detector for Special Forces.

ATMID™ All Terrain Mine Detector is ideal for magnetic soils.

VAMIDS™ Vehicular Array Mine Detection System is a vehicle array system for large area mine detection and marking.

SCOTTY specialises in providing sophisticated data, video and audio solutions for connecting headquarters to personnel in difficult and remote environments.

SCOTTY's communication solutions are based on mobility and flexibility, enabling administrative work, briefings via video, emails, recordings and Internet access from the field. SCOTTY even provides solutions for communication from moving vehicles, ships and aircrafts.

SCOTTY offers integration of all kinds of encryption devices into its communication solutions, i.e. STE, KG-175, KIV-7HS, OMNIxi, NATO encryption, etc.

SCOTTY equipment is ruggedised, quick to set up and easy to use. It is designed to operate under rough conditions and to run reliably in mission critical situations.

Armed Forces around the world trust in SCOTTY's communication solutions.

SCOTTY Tele-Transport Corporation is a member of SCOTTY Group plc.

SECURITON AG is a member of the Swiss Securitas Group and since its establishment in 1948 has been entirely involved in the field of security and surveillance. With its pioneering spirit, far-sighted approach and excellent reputation and qualification, SECURITON AG is today the leading supplier of alarm, surveillance and security systems in Switzerland.

The Mobile Modular Monitoring-System (M3 Syst) developed and manufactured by SECURITON AG is suitable for surveillance and protection tasks performed

by the army, police, frontier guards as well as those by industrial companies and security firms and is based on the latest technology and safety features.

The M3 Syst is in operation with the Swiss Army after satisfactory trials in Kosovo to protect the Suva Reka Camp. The features of the M3 Syst such as mobility, modularity, optimal monitoring tasks and the successful operational use by the Swiss Army have created a considerable international interest in the M3 Syst.

Since its foundation in 1955 FSUE ARSRI "Signal" has been developing automated control systems for wide range of weapons and military equipment.

The institute designs and produces:

- Automated fire control systems for self-propelled, towed and rocket-launching artillery units;
- Guidance and stabilisation drive units for armoured vehicles, infantry combat vehicles, rocket systems, air defence systems, artillery systems, helicopters and naval ships;
- Navigation and survey systems for mobile ground vehicles.

The equipment designed by the Institute specialists is used in well known weapons being in operation in Russia and abroad.

Lately the Institute has developed the Kapustnik-B advanced wheeled automated control system of artillery units, has modernised the Mashina artillery system, has created automated guidance and fire control systems of artillery guns, variable-frequency digital servo drive based on synchronous machine, navigation and survey system of new generation. The penetration of these devices increases combat effectiveness by 30-40 percent.

#### SIMMEL DIFESA S.p.A.

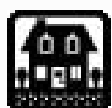

Via Ariana km. 5.200, I-00034 Colferro (Roma), Italy  
Tel: +39 06 9702427 Fax: +39 06 97092476  
E-mail: gargiulo.francesco@simmeldifesa.com.  
Contact: Dr. Francesco Gargiulo

SIMMEL DIFESA S.p.A., is operating since its constitution in the 1948 in the Defence field, is the only Italian Producer of ammunition and fuses for medium and large calibre.

Simmel Difesa "raison d'être" is the design, development, production and sale of conventional and advanced ammunition, electronic fuses, propellants, explosives, rockets and rocket systems (81mm MEDUSA, 122mm FIROS and NAROS 30) and missile warheads for the domestic and worldwide Armed Forces.

In addition to the national customer, SIMMEL DIFESA S.p.A. supplies its products in about 40 nations, achieving in the year 2000, the 4 position among the Italian Defence Companies for what concern the export sales.

In order to meet these needs, SIMMEL DIFESA S.p.A. is maintaining and renewing its technical base and its resources for research, development and production. The wide and long term experience accrued in the field of defence gives to SIMMEL DIFESA S.p.A a leading

position in the world in the supply of:  
 Ammunition 40/70mm, 76/62mm and 5"54 (127/54mm)  
 for anti aircraft – anti sea skimmer missile and target  
 bombardments role;  
 Tank ammunition cal. 105/51mm and 120mm;  
 Modular charges and ammunition cal. 155mm;  
 Propellant powders including "Green Powders";  
 Proximity fuses;

Moreover SIMMEL DIFESA S.p.A. is presently in position  
 to offer formulation of "insensitive Explosives" for filling of  
 ammunition, rockets and missile warheads, capable  
 to satisfy the most recent requirements as far as safety of  
 handling and use is concerned. SIMMEL DIFESA S.p.A.  
 is appointed AQAP 110/ ISO 9001 Qualità System.

### **SIMMEL DIFESA S.p.A. ACTIVITIES**

Conventional and Advance ammunition from 20mm up to  
 155mm;  
 Ammunition, Rockets and Missile Refurbishments;  
 Mechanical and Electronic (Proximity) fuses;  
 Propelling Powders;  
 Insensitive Explosives;  
 Ground to Ground, Air to Ground and Naval Rockets and  
 Rocket Systems (81mm MEDUSA, 122mm FIROS and  
 NAROS 30);  
 Missile warheads;  
 Safe and Arming Devices;  
 Training and Technical Assistance.

SIMMEL DIFESA S.p.A. factory is situated in Colleferro  
 (60 km from Rome) and covers an area of 1,500,000 sqm.  
 with an average production capability of 1,000,000  
 rounds per years.

The Special Operations Forces Exhibition and Conference is the Premier international Defence Exhibition focusing on Special Operations Forces and Homeland Security and is being held in Amman, Jordan, from the 27th -30th March 2006.

Exhibitors are invited to participate in this fast-moving event where special operations and security forces, their special-to-role equipment, training and delivery methods, including combat support and combat service support systems will be displayed and demonstrated. Newly constructed purpose-built facilities will enable the demonstration of state-of-the art technologies, tactics and equipment in front of a decision-making audience.

The conference comprises a series of comprehensive and topical seminars pertinent to special operations and global security issues of the day.

SOFINFRA (Societe Francaise pour les Infrastructures) is a subsidiary of SOFRESA (Societe Frangaise d'Exportation de Systemes Avances) under the control of the Ministry of Defence and is dedicated to export.

SOFINFRA is specialised in engineering and turnkey construction of military or civil infrastructures.

In addition, SOFINFRA exports the DALLEXPRESS system, unique RRR (Rapid Runway Repair) system in

the world allowing an instantaneous repair of bombed runways.

Since its creation in 1987, SOFINFRA has designed and/or constructed many infrastructures mainly in Saudi Arabia (maintenance workshops for missiles, turnkey bases for aircraft, maintenance workshops for navy ships, buildings for simulators, helicopter bases... for Ministry of Defence), in Uzbekistan (Tashkent), in Bosnia, in India, in Croatia and in Indonesia.

Important projects are presently being designed or executed for Navy, Air Force and Land Forces.

SOFINFRA has also designed and constructed confidential NBC shelter in France to face specific attack and allow the continuity of vital functions at the company upper management level.

Sofreavia, The guiding expert in civil aviation.

For 35 years, Sofreavia has developed strong skills in all fields of civil aviation. The company is providing complete and global services ranging from planning, feasibility studies, preliminary and detailed designs to project implementation, turnkey projects, technical assistance and training, in airport engineering and air traffic management. Sofreavia is acting in R&D in the field of Air Traffic Management and in the development of specific systems dedicated to Air Traffic Control.

The comprehensive expertise of Sofreavia is recognised in all ATM fields: CNS/ATM, ATN, ACAS/ASAS, certification, safety, human factors and system integration. Sofreavia is involved in most of the major European Research and Development programmes and studies for the EC and EUROCONTROL.

Sofreavia is not only a consultancy and engineering company but is also a leading systems provider. Sofreavia is developing and supplying specific systems

dedicated to ATC, communications and training.

As a result of continuous co-operation with French Civil Aviation Administration (DGAC) and industrial partners, most of the systems were first installed in France and tested in operational conditions. This enables Sofreavia to offer reliable and proven systems, which are in full compliance with the latest ICAO recommendations and standards. The famous systems offered by Sofreavia are:

**- Operational systems:**

Aeronautical Information System (AIS) and Airport Flight Data Processing System (AFDPS): ATALIS 2,  
 Communication Systems (from (AFTN to ATN): PROATN,  
 Traffic Metering and Sequencing System: MAESTRO AMAN/DMAN,

**- Training products:**

Aerodrome and Air Traffic Control (radar and non-radar) simulators: SCANSIM 2, System for TCAS training: RITA2.

SOFRESA was set up 30 years ago by the French Ministry of Defence as a tool to boost export sales of the French Defence industry. As of today, nearly 20 percent of worldwide French defence export sales have been finalised through SOPRESA.

SOFRESA operates in a unique close relationship with the French Government along with its other shareholders which are majors in the aerospace, naval, land and electronics fields.

Its missions consist in marketing of defence equipment and systems, contracts negotiation, and after sales management. Additionally, SOFRESA can bring its

expertise in the field of offsets, transfer of technology and know how, and specific financial schemes.

Its activity has been focused from the outset onto Middle East countries throughout a specific network of permanent offices. For the past ten years, SOFRESA has expanded its activities to new geographical areas.

SOFINFRA, a subsidiary of SOFRESA, is specialised in engineering and turnkey construction of both military and civilian infrastructures.

The SOFRESA Group employs some 106 people in France and abroad.

Headquartered in Dubai UAE, Space Imaging Middle East (SIME) was founded in 1997 to become the first commercial satellite imaging company in the Middle East. SIME pioneered the introduction of high-resolution satellite imagery to the Middle East region by introducing imagery from IRS (5m resolution) in 1998 and IKONOS (1m resolution) in 2000. Using a UAE based ground receiving station, SIME outperforms the competition through its ability to task and to receive its imagery for same day delivery to its clients globally. Another key advantage is the company extensive imagery archive created from 1998 to date from multiple sensors (Landsat, IRS and IKONOS) covering the Middle East and the Indian sub-continent region. . The Company has developed products and value-added solutions and applications for a variety of primary and secondary

markets in addition to state-of-the-art GIS solution for electronic hosting and delivery of Geospatial information To constantly lead the market, SIME has set up a technical and operational partnership network through which it continuously adds new sensors and new solutions

Spantech Pty Ltd is a major supplier of hardened and special purpose buildings for Defence in Australia, South Pacific, Gulf region, and South East Asia.

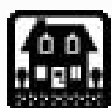

Spantech provides a comprehensive design and construction service with a complete range of Explosives Storehouses, Hardened Aircraft Shelters, Personnel Protection Shelters and special purpose defence facilities.

The distinctive Spantech structure features a composite curved panel and concrete self-supporting arch utilising the patented Spantech Construction System. This system ensures fast, high quality construction at an economical price.

The Spantech Construction System provides maximum useable floor space free of internal columns. In explosives storehouses, the incorporation of the system minimises the overall real estate and infrastructure requirements and reduces maintenance costs.

Designed to meet NATO standards, Spantech and the Australian Department of Defence have conducted stringent full-scale explosive tests to guarantee maximum safety performance.

Spantech is the International Defence Construction Specialist known worldwide.

A specific insight gives rise to the Stonefly project in 1993. The idea is of reconsidering city shoes and putting forward a new combination of comfort and style. In the Stonefly project, creativity and quality of footwear Made-in-Italy are blended with principles of experience, research, innovation and market perception.

It's the beginning of an entrepreneurial story which in a few years, has led to Stonefly becoming a leader in comfort both in Italy and around the world. A project grounded on market analysis, ongoing interpretation of market needs and trends, a rigorous approach, which at each new collection, leads one to interpret comfort in line with the current trends.

Stonefly's success is interwoven with its geographical and entrepreneurial location, the Montebelluna Shoe District, a world leader in technical footwear production, whose name is bound to the history of footwear.

Stonefly has placed the foot's well being at the highest level of its commitment: five percent of its annual turnover is reinvested in research and product development, elements of the brand's success from the start.

Founded in 1970, the Taiwan External Trade Development Council (TAITRA) is a non-profit trade promotion organisation that is partially supported by the government and some industrial and commercial associations.

With over 30 branch offices around the world, TAITRA assists both Taiwan firms expand their overseas markets as well as provide product/supplier sourcing assistance and other trade related services to foreign enterprises wishing to do business with Taiwan. Besides organising around 20 international trade shows annually in Taipei, TAITRA leads numerous Taiwanese suppliers to participate in overseas trade missions and trade promotion activities in many countries. In addition, TAITRA undertakes many initiatives to help foreign businesses establish a wider presence in Taiwan.

Associated with its sister organisations, the Far East Trade Services, Inc. (FETS) and the Taipei World Trade Center (TWTC), TAITRA does everything possible to adapt its trade promotion strategies to the changing international conditions.

 Contact: Vice President, Marketing

For 30 years, TCOM has been at the forefront of innovative developments in the tethered aerostat and airship industry. TCOM is a systems engineering and payload integration company. Our basic product line consists of tethered, aerodynamically stabilised balloons (aerostats) of various sizes supporting a wide variety of electronic payloads (radar, signal intelligence, communication systems, cameras, etc.) at altitudes from 300 metres to 6100 metres above the earth. TCOM's 15M<sup>®</sup> aerostat, similar to our new 17M<sup>™</sup> aerostat, is presently deployed in Afghanistan and Iraq under the U.S. Army RAID initiative. Furthermore, we are the platform supplier for the U.S. Army JLENS Cruise Missile Defence System.

At IDEX, we are introducing the 17M<sup>™</sup> Tactical Aerostat System, developed in response to the emerging need for a compact, easily transportable platform for look-down active/passive surveillance sensors, cameras and communication systems. There will be daily demonstrations of the aerostat system flying EO/IR and Radar payloads.

Teleplan AS is among the world's leading privately-owned system solutions and consultancy companies. Our

Consultants and Software Engineers carry out advisory and system development services for public, private and defence clients worldwide.

Together with the Norwegian Armed Forces, Teleplan has developed Norway's principal National Command and Control System, known as NORCCIS. As the Norwegian Armed Forces' main system contractor for NORCCIS, Teleplan is now responsible for positioning it into the international market.

Designed for military users at all levels, NORCCIS has been in operational use since 1992. With a continuous upgrade programme comprising both Hardware and Software, NORCCIS has been acclaimed as the most interoperable national C4IS at NATO's Joint Warrior Interoperability Demonstrations.

Teleplan has earned considerable international acclaim since being founded 45 years ago.

Thales is a global electronics group serving professional markets in three areas defence, aerospace and security. Its activities include prime contracting for large-scale programmes, complex system architecture, and the supply of equipment and systems and related support services.

With 2003 revenues of E10.6 billion, Thales is recognised as a world leader in high technology. The group's engineers draw on a solid foundation of generic and dual civil/military technologies centred on real-time management and distribution of information.

The other distinctive characteristic of Thales' businesses is its international dimension both in terms of the markets it serves and the countries of operation. With industrial operations in nearly 30 countries, Thales is pursuing a unique multi-domestic strategy, which is of key relevance in defence markets. This strategy is designed to provide the group with the local presence it needs to serve both civil and military customers effectively, anticipate demand and propose the right technical solutions at the right price to meet their requirements.

TNO Defence, Security and Safety – committed to innovation for a safer world

TNO Defence, Security and Safety' is the title under which TNO operates as a strategic partner for the Dutch Ministry of Defence and makes innovative contributions to enhancing the security of the Netherlands both at home

and abroad. We also use our accumulated knowledge for foreign governments and for defence-related industries.

We focus on Defence in the broadest sense of the word and our involvement covers a range of activities: military operations, military equipment, command and operational decision making, threat and protection, instruction and training. In the area of Security and Safety, the emphasis lies on combating crime, calamity and terrorism.

TNO Defence, Security and Safety also works for the aerospace and maritime sectors, markets in which defence is a vital aspect. In terms of aerospace, we concentrate largely on improving safety while for the maritime sector we focus on shipbuilding.

We collaborate with the defence industry to develop innovative solutions.

Our stakeholders include the Ministries of Defence, Home Affairs, Justice, Foreign Affairs as well as Transport, Public Works and Water Management, regional/national police forces and fire services, and defence-related industries such as Thales, Imtech, Stork, Damen, Boeing, Siemens, Ericsson, QinetiQ, Dutch Space and CMG.

TNO Defence, Security and Safety has a thousand employees who develop and apply knowledge in the form of advice, applied research and product innovation.

TNO Defence, Security and Safety has three research locations: The Hague, Rijswijk and Soesterberg.

### HIGH QUALITY AND TRADITIONS

The Tula Cartridge Works is the leading enterprise of ammunition industry in Russia. The plant specialises in output of ammunition for light small-arms weapons and is the largest in the country supplier of ammunition to domestic and foreign markets.

The history of the plant dates back to the end of the 19th century when in 1880 the emperor Alexander II approved the regulations on establishment of ammunition production in Tula.

At present the plant produces ammunition for the army, police as well as for the civil market, including such popular all over the world calibres as 5,45x18 PSM; .380 ACP; 9 mm Makarov; 9 mm Luger; 40 S&W; .45 AUTO; 5,45x39 Kalashnikov; 7,62x39 Kalashnikov; 5,56x45; 7,62x51.

Among the latest developments of the enterprise a special place is occupied by ammunition which is used by

law enforcement bodies in anti-terrorist struggle.

The state company "ROSOBORONEXPORT" exports the Tula-produced ammunition to dozens of countries throughout the world.

**Surveillance and Reconnaissance Technologies**

The United Arab Emirates Armed Forces Surveillance And Reconnaissance Technologies is designed and built in support of the United Arab Emirates Armed Forces mission to maintain security of the Nation and Peace in the region. Surveillance and reconnaissance systems are the eyes and ears of the political and military structure through which the necessary information is gained to support the decision making process. As an example, satellite imagery in combination with other collection systems (such as UAV, balloon, etc.) allow for persistent monitoring of illegal activities, smuggling, border intrusions, troop movements and military installations.

The United Arab Emirates Armed Forces Surveillance And Reconnaissance Systems provide critical assistance to the Early Warning, Monitoring and Security missions of our Armed Forces. Further, these technologies also enhance our Forces efficiency in support of critical humanitarian operations such as emergency relief, regional security and peacekeeping operations.

The United Arab Emirates Surveillance And Reconnaissance brings into play the latest technology and experience available to turn data into actionable information - leading to achieving information superiority in the 21st century. New technologies have made a dramatic and powerful impact on the means available to support our national security objectives.

The UAE Surveillance And Reconnaissance Systems have the ability to task, collect and produce Geospatial products, which are analyzed and the relevant information disseminated to the various Armed Forces units. This accurate and timely intelligence information provides for a true assessment of a situation, which greatly facilitate maintaining security and peace in the region.

The UAE Armed Forces has an aggressive technology insertion program. All programs and activities are built around the concept of flexibility, in order to add new technology as it becomes available, and continually improve on the techniques used today. As an example,

the UAE Armed Forces announce the opening of its UAV Research and Technology Centre in Abu Dhabi. Directed and operated by UAE nationals, the centre is the first facility of its kind in the GCC region.

The UAE Offsets Program, introduced in early 1992, has resulted in the creation of several small-to-medium sized joint ventures in partnership with international defence contractors, who had offset obligations emanating from the sale of armaments and equipment to the UAE Armed Forces.

The UAE Offsets Group (UOG) has been fortunate to have the support of the country's leadership and has conducted its business in line with the vision and directives of His Highness Sheikh Khalifa Bin Zayed Al Nahyan, UAE President and Ruler of Abu Dhabi, and Sheikh Mohammed Bin Zayed Al Nahyan, Abu Dhabi Crown Prince and Deputy Supreme Commander of the UAE Armed Forces.

The objective of the offsets program is to create wealth for UAE nationals through the creation of new businesses.

The implementation of the offsets program is not the only responsibility assigned to UOG by the Abu Dhabi government. Over the years the group's role has matured into that of a development agency and a venture capital organisation. It is also working as a think-tank and assisting the government to develop and implement new projects on a fast track basis.

PRIMA Terra-Tech Instant Roadway - tested and proved under some of the most extreme conditions, PRIMA Terra-Tech was developed for the military to provide a quick and

easy, stable, ground covering with a heavy load-bearing capability. PRIMA Terra-Tech portable hardstand flooring and roadway is the fastest and easiest to lay, as well as the strongest non-metal system available.

With no breakable jointing pieces, clips or locks, the, unique hexagonal, interlocking design will disperse the loading by up to 70 percent, enabling PRIMA Terra-Tech instant roadway/taxiway to accommodate cargo planes, cargo helicopters and fully laden 40ft articulated trailers and tractors.

PRIMA Terra-Tech is the solution for instant access - roadways, taxiways, helipads and hangars.

New improved PRIMA Gridmat Portable Flooring - is the strongest modest most advanced, cost effective, lightweight portable flooring system available today. Supremely strong and robust, quick and easy to install, PRIMA Gridmat is the ultimate portable flooring solution for tents, portable buildings, indoor/outdoor catering areas, paths and rackways etc.

Vectronix AG in Heerbrugg, Switzerland, specializes in optronics for observation, orientation and rangefinding. The highly successful family of VECTOR Rangefinder Binoculars continues to expand. Three of the top models will be exhibited: VECTOR 21, VECTOR NITE with built in image intensification, VECTOR 21 GL with cableless interface to "GonioLight". This latest combination is a lightweight, modular system for dismounted forward observers.

In production for the Swiss Army and shown as an ideal tool for expedition forces and MOUT, the PLRF10 Pocket Laser Range Finder is the most rugged and compact 2km rangefinder available today.

Vectronix also added a new product to the family of hand-held night vision goggles, binoculars and pocketscopes.

The new BIM4 Night Vision Goggle is designed to enhance the situational awareness of the future soldier. It mounts on his helmet, is extremely short and well balanced, and permits the injection of messages/imagery into the wearer's field of view.

Established in 1989 as a powerboat racing team for the Emirate of Dubai, Victory Team are known throughout the world, not only for the world championship titles and accolades that they have won in the world of offshore, but also for their very considerable development and expertise in the fabrication of high speed race boats and engines. In 2002 Victory Team made the move to utilise their years of experience with the opening of their

commercial division, focusing on the construction of state of the art high speed fast intervention craft, including the P56 and the P42.

The P-56 and P-42 Fast intervention craft have critical aspects of structural engineering, with a result that combines the latest in materials and construction technology for vessels of this type.

All structures are built entirely of sandwich construction. The combination of thin, very high strength composite skins, spaced apart by a tough, engineered core, bonded under a vacuum bag process to insure ultimate adhesion, produces a very stiff, strong laminate at minimum weight.

Additionally to insure toughness and longevity, only the best resins, reinforcements, and core materials have been specified.

**Western Auto Security Vehicles**

Security is an overriding concern in today's world and most security measures are designed to shield only buildings or people from attacks. Automobiles require

protection too. Parked or moving vehicles are easy targets for attack. Luckily, Western Auto Security provides a full range of security solutions. Drawing on the expertise of our partner Blindex S.A., we armour automobiles against attacks from many a type of bullets and bombs.

**THE STANDARD FOR SECURITY**

Our partner Blindex S.A. has over 20 years of experience in providing security solutions for vehicles of different types. The company has developed a vehicle armouring system that offers differing levels of ballistic protection, tailored to individual vehicles, and compliant with American and European standards. The armouring system features a hermetically sealed passenger compartment, an all round ballistic reinforcement of the passenger compartment, elimination of less protected areas caused by offset windows, Higher resistance to explosive and ballistic attacks and noise reduction as a result of ballistic overlapping technology.

**PROVEN IN ACTION**

The effectiveness of these security solutions for automobiles have been actually tested in real world conditions. Military and civilian vehicles treated by Blindex S.A. have successfully withstood attacks by terrorist groups and criminal gangs in Colombia S. America, Middle East, Africa and CIS. The company takes great pride in the lives saved by its know-how.

**MATERIALS**

Western Auto ensures a combination of high-tech composite materials and more conventional metal armour plate to protect vehicles. Though many armouring companies are now using lightweight fibre materials which are about quarter the weight of steel, much of the extra weight is in the windows which are made of special splinter-proof glass/polycarbonate laminate material that can be up to 72 mm (2.5 in.) thick. The materials we use include high quality armoured crystal, reinforced glass, polycarbonate anti-fragment film, Ballistic steel plate, Laminated Twaron panels, Ballistic nylon mantle, Ballistic ceramic panels.

**LEVELS OF PROTECTION**

Level B3, Level B4, Level B5 & Level B6/B7

**TECHNOLOGY V/S TERRORISM**

The technology used by us does not affect the external appearance of the automobiles to be armoured.

Will-Burt is a leading manufacturer of telescoping masts and accessories for the militaries and governments worldwide. Will-Burt offers vehicle, shelter or ground mounted masts for applications including communications, surveillance and reconnaissance. The pneumatic mast line has extended heights to 41 metres and payload capacity to 545 kg. The Saber™ series of mechanical masts are constructed with high strength carbon fibre tubes that allow for heights to 12.4 meters with payload capacity to 204 kg. The Stiletto™ series of mechanical masts are light weight and allow for rapid deployment with heights to 15 metres and payload capacity to 91 kg. The Quick Erecting Antenna Mast (QEAM) mast series are manually deployed for quick field implementation with heights to 15 metres and payload capacity to 23 kg. Will-Burt specialises in custom designed masts to meet specific requirements.

William Cook Defence Limited is a member of the William Cook Group, Europe's largest steel casting manufacturer and the world's only fully integrated steel casting manufacturer. With over 40 years experience William Cook is one of the world's leading manufactures of Track Systems, Cast Turrets, Cast Armour and Suspension & Running Gear components for Armoured Fighting Vehicles.

Our focus is on providing highly reliable and durable products; this focus has resulted in William Cook Defence being the sole supplier of track systems to Alvis Vickers Limited (now part of BAE Systems). Furthermore, our

track systems are fitted to almost all armoured vehicles in service with the British Armed Forces. Track and associated components are available for a wide range of vehicles of international origin, with BMP, M113 and AMX, M109/110 and Leopard to name but a few.

William Cook Defence has the technology, facilities, experience and breadth of knowledge to provide the right product at the right price whatever the application.

## Jane's Defence Forecasts - Military Aircraft Programmes

At last! An authoritative defence forecast database with in-depth budget analysis and related daily news.

Quite simply, intelligence you can't afford to be without!

Due for late January release, and official launch at IDEX, *Jane's Defence Forecasts - Military Aircraft Programmes* is a unique and extensive database that tracks and projects military aircraft upgrades and procurement programmes up to 20 years in advance. It covers over 600 airframes currently in service or in production across 64 leading nations, plus NATO.

Continually updated, this sophisticated yet user friendly database, will enable you to identify by country, the systems being upgraded on various platforms, so you can analyse long-range programmes that match your strategic objectives.

During IDEX, 13-17 February 2005 in Abu Dhabi, Jane's staff will be giving a series of presentations to demonstrate the depth and breadth of this exciting new database. Stop by our stand next to the show daily office and see just how good *Jane's Defence Forecasts - Military Aircraft Programmes* is for yourself!

For further details please contact your local Jane's office.

Welcoming you to Abu Dhabi.

Etihad Airways.

*"Voted World's Leading New Airline"*

Welcome to a whole new world of flying. At Etihad Airways, the National Airline of the United Arab Emirates, fresh ideas, expertise and new energy combine to make you feel perfectly at home. For the first time, you'll experience flying as a guest and not a passenger in our exclusive Diamond, Pearl and Coral zones. Relax on our modern wide bodied aircraft and enjoy true Arabian Hospitality. Fly with us. We're sure you'll enjoy the difference.

The National Airline of the United Arab Emirates

For more information please visit your travel agent or call Etihad Airways on 800 2377

# Integrated expertise

Integrating highly sophisticated technologies and interweaving the different aspects of the armed and security services is a huge challenge facing modern nations. QinetiQ is a world-renowned defence and security technology company with a distinguished heritage of providing innovative solutions, impartial advice and revolutionary products to both the defence and civil industries.

Through our whole life systems expertise, we provide products and services that create seamless national security across the land, air and maritime arenas.

QinetiQ will be showcasing a range of products at IDEX, including:

- **X-Net Vehicle Arresting Device** – a non-lethal, man portable device capable of bringing vehicles to a rapid standstill.
- **Cerberus 360 swimmer detection sonar** – for all round underwater threat detection.

- **Super Sensitive GPS** – providing clear reception and tracking indoors, in the urban canyon and under wet foliage.
- **Agile C2** – an integrated command and control system enabling collaborative planning and monitoring of joint air operations.
- **MST-Lite** – a portable simulator for mission system training of air surveillance, control and tactical data link communications scenarios.
- **Camouflage Assessment System** – for the evaluation and optimisation of platform survivability.
- **Avionics Systems Integration** – from feasibility to whole systems design.

Come and see us at Stand 7109, Hall 7 at IDEX or visit [www.QinetiQ.com](http://www.QinetiQ.com)
